Literature review on linkages between

child nutrition and economic growth Haile, Beliyu, Azzarri, Carlo, Ahn, Hee Eun, 2021-11-24 This document summarizes

published and grey literature on conceptual framework on the link between child nutrition and economic growth

determinants of child undernutrition types of investments to enhance maternal and child nutrition and linkages between

urbanization and child nutrition Several insights emerge from the review First and despite progresses over the last several

decades maternal and child malnutrition is still prevalent in developing countries and the progress has been uneven While

the percentage of chronically malnourished stunted children declined across the developing world the number of stunted

children in Africa increased due to slower reduction in stunting prevalence and population growth Many developing countries

are experiencing the coexistence of different forms of malnutrition including undernutrition micronutrient deficiency and

overnutrition Second child undernutrition especially stunting during the first 1 000 days of life has several short and long

term effects on individuals and economies that include impaired cognitive and non cognitive development poor educational

performance low productivity and earnings and higher healthcare costs Third the determinants of child undernutrition are

broadly classified as the immediate determinants including dietary intake and diseases the underlying determinants that

include household food security quality of care and household living environment and access to healthcare and the basic

determinants that include access to productive resources stock of capital as well as socioeconomic political and cultural

factors Investments to enhance child nutrition can target either the immediate determinants known as nutrition specific

investments or the underlying determinants known as nutrition sensitive investments Fourth the effect of urbanization on

child nutrition is mostly determined by the extent to which urban settlements offer their residents with better economic

opportunities e.g. better paying jobs and markets for nutritious food and services e.g. healthier living environments Fifth given

the multilayer causes of child undernutrition a multi sectoral approach is needed to address the various determinants of

undernutrition to improve maternal nutrition promote optimal infant and young child feeding practices enhance household

food security as well as improve healthy living environment and access to quality health care
