Nutritional And Toxicological Consequences Of Food Processing:

Nutritional and Toxicological Consequences of Food Processing Mendel Friedman, 2013-11-21 A variety of processing methods are used to make foods edible to permit storage to alter texture and flavor to sterilize and pasteurize food and to destroy microorganisms and other toxins These methods include baking broiling cooking freezing frying and roasting Many such efforts have both beneficial and harmful effects It is a paradox of nature that the processing of foods can improve nutrition quality safety and taste and yet occasionally lead to the formation of anti nutritional and toxic compounds These multifaceted consequences of food processing arise from molecular interactions among nutrients with each other and with other food ingredients Since beneficial and adverse effects of food processing are of increasing importance to food science nutrition and human health and since many of the compounds formed have been shown to be potent carcinogens and growth inhibitors in animals I organized a symposium broadly concerned with the nutritional and toxicological consequences of food processing The symposium was sponsored by the American Institute of Nutrition AIN Federation of American Societies for Experimental Biology FASEB for its annual meeting in Washington D C April 15 1990 Invited speakers were asked to develop at least one of the following topics 1 Nutrient nonnutrient interactions between amino acids proteins carbohydrates lipids minerals vitamins tannins fiber natural toxicants etc 2 Effects of radiation 3 Thermally induced formation of dietary mutagens antimutagens carcinogens anticarcinogens antioxidants and growth inhibitors 4 Effects of pH on nutritional value and safety

Trace Elements in Man and Animals--9 National Research Council Canada, 1997 Presents papers from an international meeting of specialists from a variety of disciplines sharing an interest in trace elements The papers are organized into broad categories covering such topics as trace element interactions in the food supply and nutrition trace elements and genetic regulation trace elements in pregnancy and lactation assessment of trace element status kinetic modelling trace elements in the environment and food supply trace elements brain function and behaviour membrane function and cell signalling analytical experimental and isotopic techniques ethics of trace element research defining trace element requirements of infants trace element intervention studies trace elements and animal production free radical mediated disease and food and nutrition policy analytical quality control infection and immune function trace element binding proteins trace elements in growth and metabolism mechanisms of trace element toxicity and metabolic and physiological consequences of trace element deficiencies

Impact of Processing on Food Safety Lauren S. Jackson, Mark G. Knize, Jeffrey N. Morgan, 2012-12-06 The contents of this book are the proceedings of the ACS symposium Impact of Processing on Food Safety which was held April 16 17 1997 at the American Chemical Society National Meeting in San Francisco CA This symposium brought together researchers from diverse backgrounds in academia government and industry Twenty speakers discussed topics ranging from the regulatory aspects of food processing to the microbiological and chemical changes in food during processing The main goal of food processing is to improve the microbial safety of food by de

destroying pathogenic and spoilage organisms Food processing can also improve food safety by destroying or eliminating naturally occurring toxins chemical contaminants and antinutritive factors Unfortunately processing can also cause chemical changes that result in the formation of toxic or antinutritive factors The purpose of this book is to summarize our knowledge of both the beneficial and deleterious effects of processing Chapter I considers the consumer's perceptions about food contaminants and food processing Chapter 2 summarizes the effects of traditional and nontraditional processing methods on microorganisms in food Chapters 3-6 review the effects of processing on lipids fatty acids and cholesterol in food Changes in the nutritive value of vitamins and minerals as a result of processing are discussed in chapter 7 Chapter 8 concentrates on how processing reduces the allergenicity of some foods

Chemistry and Safety of Acrylamide in Food Mendel Friedman,Don Mottram,2006-07-18 Reports that heat processing of foods induces the formation of acrylamide heightened interest in the chemistry biochemistry and safety of this compound Acrylamide induced neurotoxicity reproductive toxicity genotoxicity and carcinogenicity are potential human health risks based on animal studies Because exposure of humans to acrylamide can come from both external sources and the diet there exists a need to develop a better understanding of its formation and distribution in food and its role in human health To contribute to this effort experts from eight countries have presented data on the chemistry analysis metabolism pharmacology and toxicology of acrylamide Specifically covered are the following aspects exposure from the environment and the diet biomarkers of exposure risk assessment epidemiology mechanism of formation in food biological alkylation of amino acids peptides proteins and DNA by acrylamide and its epoxide metabolite glycidamide neurotoxicity reproductive toxicity and carcinogenicity protection against adverse effects and possible approaches to reducing levels in food Cross fertilization of ideas among several disciplines in which an interest in acrylamide has developed including food science pharmacology toxicology and medicine will provide a better understanding of the chemistry and biology of acrylamide in food and can lead to the development of food processes to decrease the acrylamide content of the diet

Handbook of Food Toxicology S.S. Deshpande,2002-08-29 From health and economic consequences to exposure assessment and detoxification this reference comprehensively covers the formation characteristics and control of various toxins that occur in the production storage handling and preparation of food The author discusses toxin sources mechanisms routes of exposure and absorption and their chemical and biochemical components to prevent contamination of food products and reduce epidemics of foodborne disease The book contains more than 3000 references to facilitate further research as well as recent guidelines from the FDA and World Health Organization regarding food hygiene and safety
