Mobile Agents and Security Giovanni Vigna,2003-05-20 New paradigms can popularize old technologies A new standalone paradigm the electronic desktop popularized the personal computer A new connected paradigm the web browser popularized the Internet Another new paradigm the mobile agent may further popularize the Internet by giving people greater access to it with less eort MobileAgentParadigm The mobile agent paradigm integrates a network of computers in a novel way designed to simplify the development of network applications To an application developer the computers appear to form an electronic world of places occupied by agents Each agent or place in the electronic world has the authority of an individual or an organization in the physical world The authority can be established for example cryptographically A mobile agent can travel from one place to another subject to the des nation place s approval The source and destination places can be in the same computer or in di erent computers In either case the agentinitiates the trip by executing a go instruction which takes as an argument the name or address of the destination place The next instruction in the agent s program is executed in the destination place rather than in the source place Thus in a sense the mobile agent paradigm reduces networking to a program instruction A mobile agent can interact programmatically with the places it visits and if the other agents approve with the other agents it encounters in those places The Prairie Farmer ,1867 **Prairie Farmer** ,1867
