While the circumnavigation of the solar system seems farfetched it may not be once the problem of effective anti gravitational control is solved In this book I have assumed that the many researchers now actually at work on this problem will achieve such a result in the next decade It is not at all impossible that they may for we all know that the more minds that work at a problem the sooner it will be solved The discovery of a means of negating reversing or otherwise utilizing the

immense force of gravitation for space flight purposes is now thought to be within the bounds of probability It should occur some time within the next hundred years possibly in even the short period I assume here Once solved the severe handicaps imposed on space exploration by the weight and chemical limitations of rockets would no longer apply The whole timetable of our conquest of the planets in our solar system would be tremendously speeded up from hot Mercury all the way out to frigid Pluto In describing the visits of the spaceship Magellan to the planets I have endeavored to adhere to known facts and the more reasonable assumptions about each of these worlds The planet Pluto however deserves further comment occupying as it does both an important role in this adventure and a unique one in actual astronomical lore Back at the dawn of this century many astronomers and notably Dr Percival Lowell studied certain irregularities in the orbit and motion of Neptune at that time believed to be the outermost planet They decided that these eccentricities or perturbations as they are called could only be caused by the presence of another yet undiscovered planet beyond Neptune Following this line of research a young astronomer Dr Clyde Tombaugh working at Lowell s own observatory was able to announce on March 13 1930 that he had finally found this ninth world which he named Pluto In the years that have followed Pluto has proven to be a truly puzzling planet Unlike its neighbors from Jupiter outward it is not a giant world light and gaseous in nature Instead it belongs physically to the small dense inner planets of which Earth is one The latest viewpoint on this planet whose size and weight seem quite like those of Earth is that it may not be a true child of the Sun but an outsider captured as it roamed the trackless realms of galactic space Its orbit is highly eccentric and rather lopsided taking it as far away from the Sun as four and a half billion miles and as close to the Sun as two and three quarter billion miles thereby cutting inside the orbit of Neptune itself In fact during the period from 1969 to 2009 covering most of the lifetimes of the younger readers of this book Pluto will not be the ninth planet but the eighth for it will be at its closest in those years Huge Neptune will thus regain temporarily the title of being the Sun s farthest outpost This orbital eccentricity has lead some astronomers to speculate on the possibility that Pluto may once have been briefly held as a satellite of Neptune And following that line of thought the possibility also has been suggested that Neptune s larger moon Triton may once have been a companion of Pluto which failed to break away from Neptune s grip I think that the first men to land on Pluto are going to make some very astonishing discoveries But I am also sure that they will never go there in rockets They will have to make the immense trip by some more powerful means like the anti gravitational drive D A W
