Seventeen Simple Lectures On General Relativity Theory:

Seventeen Simple Lectures on General Relativity Theory H. A. Buchdahl, 1981-11-27 A self contained critical introduction to Einstein's general theory of relativity that supplements the many conventional expository works on relativity. Emphasis is on clarification of underlying notions, assumptions, prejudices and points of semantic confusion. *Seventeen simple lectures on general relativity theory* Hans Adolph Buchdahl, 1981. *A First Course in General Relativity* Bernard F. Schutz, 1985-01-31 This textbook develops general relativity and its associated mathematics from a minimum of prerequisites leading to a physical understanding of the theory in some depth. *A First Course in General Relativity* Bernard Schutz, 2022-06-30 This widely used textbook explains general relativity for advanced undergraduates requiring only a minimal background in mathematics. Cosmology: The Physics Of The Universe - Proceedings Of The Eighth Physics Summer School Brian A Robson, N Visvanathan, William S Woolcock, 1996-11-27. **Evolution of Black Holes in Anti-de Sitter Spacetime and the Firewall Controversy** Yen Chin Ong, 2015-11-27 This thesis focuses on the recent firewall controversy surrounding evaporating black holes and shows that in the best understood example concerning electrically charged black holes with a flat event horizon in anti de Sitter AdS spacetime the firewall does not arise. The firewall which surrounds a sufficiently old black hole threatens to develop into a huge crisis since it could occur even when spacetime curvature is small which contradicts general relativity. However the end state for asymptotically flat black holes is ill understood since their curvature becomes unbounded. This issue is avoided by working with flat charged black holes in AdS. The presence of electrical charge is crucial since black holes inevitably pick up charges throughout their long lifetime. These black holes always evolve toward extremal limit and are then destroyed by quantum gravitational effects. This happens sooner than the time required to decode Hawking radiation so that the firewall never sets in as conjectured by Harlow and Hayden. Motivated by the information loss paradox the author also investigates the possibility that monster configurations might exist with an arbitrarily large interior bounded by a finite surface area. Investigating such an object in AdS shows that in the best understood case such an object much like a firewall cannot exist. Literature 1983, Part 1 S. Böhme, Prof. Dr. Walter Fricke, H. Hefele, I. Heinrich, W. Hofmann, D. Krahn, V. R. Matas, Dr. Lutz D. Schmädel, G. Zech, 2013-11-11 *Astronomy and Astrophysics Abstracts* aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics and their border fields. It is devoted to the recording, summarizing and indexing of the relevant publications throughout the world. *Astronomy and Astrophysics Abstracts* is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union. Volume 33 records literature published in 1983 and received before August 1, 1983. Some older documents which we received late and which are not surveyed in earlier volumes are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organizations, observatories and publishers which provide us with complimentary copies of their publications.

Starting with Volume 33 all the recording correction and data processing work was done by means of computers The recording was done by our technical staff members Ms Helga Ballmann Ms Mona El Choura Ms Monika Kohl and Ms Sylvia Matyssek Mr Martin Schlotelburg and Mr Ulrich Uberall supported our task by careful proofreading It is a pleasure to thank them all for their encouragement Heidelberg September 1983 The Editors Contents Introduction 1 Concordance Relation ICSU AB AAA 3 Abbreviations 10 Periodicals Proceedings Books Activities 001 Periodicals 15 002 Bibliographical Publications Documentation Catalogues Atlases 47 003 Books 51 004 History of Astronomy 58 005 Biography 64 006 Personal Notes 65 007 Obituaries

Concepts of Mass in Contemporary Physics and Philosophy Max Jammer, 2009-06-08 The concept of mass is one of the most fundamental notions in physics comparable in importance only to those of space and time But in contrast to the latter which are the subject of innumerable physical and philosophical studies the concept of mass has been but rarely investigated Here Max Jammer a leading philosopher and historian of physics provides a concise but comprehensive coherent and self contained study of the concept of mass as it is defined interpreted and applied in contemporary physics and as it is critically examined in the modern philosophy of science With its focus on theories proposed after the mid 1950s the book is the first of its kind covering the most recent experimental and theoretical investigations into the nature of mass and its role in modern physics from the realm of elementary particles to the cosmology of galaxies The book begins with an analysis of the persistent difficulties of defining inertial mass in a noncircular manner and discusses the related question of whether mass is an observational or a theoretical concept It then studies the notion of mass in special relativity and the delicate problem of whether the relativistic rest mass is the only legitimate notion of mass and whether it is identical with the classical Newtonian mass This is followed by a critical analysis of the different derivations of the famous mass energy relationship $E = mc^2$ and its conflicting interpretations Jammer then devotes a chapter to the distinction between inertial and gravitational mass and to the various versions of the so called equivalence principle with which Newton initiated his Principia but which also became the starting point of Einstein's general relativity which supersedes Newtonian physics The book concludes with a presentation of recently proposed global and local dynamical theories of the origin and nature of mass Destined to become a much consulted reference for philosophers and physicists this book is also written for the nonprofessional general reader interested in the foundations of physics

Philosophy, Mathematics and Modern Physics Enno Rudolph, Ion-Olimpiu Stamatescu, 2012-12-06 In recent times a new dialogue has begun between the natural sciences and the humanities This is particularly true of physics and philosophy whose sphere of mutual interest expanded significantly with the advent of quantum mechanics Among other topics the discussion covers the evolution of theories the role of mathematics in the physical sciences the perception and cognition of nature and definitions of space and time In contrast to the custom of the last two centuries mathematics the language of physics is once again finding a respected place in the discourse of
