Looking Backward Looking Forward Forty Years Of United States Human Spaceflight Symposium 8 May 2001:

Looking Backward, Looking Forward, Forty Years of U.S. Human Spaceflight Symposium, May 8, 2001, NASA SP-2002-4107, 2002, (CORRECTION), * United States. National Aeronautics and Space Administration, 2003* *Looking Backward, Looking Forward* National Aeronautics And Administration, 2013-10 Human spaceflight is the driver for most activities that the National Aeronautics and Space Administration NASA undertakes While NASA certainly has a rich aviation research heritage and has also done pathbreaking scientific and applications work using robotic spacecraft human spaceflight is a difficult and expensive endeavor that engenders great popular enthusiasm and support for NASA Much of this public interest stems from pushing boundaries of adventure by exploring the unique and challenging physical environment of space Humans can also perform tasks in space that machines cannot We can think analyze and make judgment calls based on experience and intuition in real time This NASA history document contains sixteen fascinating essays about the past and future of spaceflight written by some of the most important and famous figures in the space community A confluence of anniversaries made the spring of 2001 a propitious time for reflection on a forty year record of achievement and on what may lie ahead in the years to come The fortieth anniversary of Alan Shepard s first spaceflight the first time an American flew in space took place on 5 May 2001 The fortieth anniversary of Yuri Gagarin s spaceflight the first time a human traveled into space and orbited Earth took place on 12 April 2001 Coincidentally this date was also the twentieth anniversary of the launch of STS 1 the first Space Shuttle flight In addition 25 May was the fortieth anniversary of President John F Kennedy s famous urgent needs speech in which he proposed putting an American on the Moon before this decade is out initiating the Apollo Project Last but not least the Expedition One crew to the ISS had finished its historic first mission in the spring of 2001

Reinventing NASA Roger Handberg, 2003-12-30 From its beginnings NASA was convinced that its real mission was to create the opportunity for a much different and better society on Earth namely through human space flight Pursuit of such a goal has led the agency to persist in certain activities even when they conflict with the wishes of Congress and the President

Recent changes in the international environment changes that began well before September 11 2001 have brought the military back into the field of human space flight a situation that holds certain hazards for NASA since the military is more powerful politically Dramatic changes could be in store changes that could severely damage NASA s capacity for continuing what it sees as its primary objective While most analyses see the agency as riddled with incompetence Handberg argues that NASA s troubles are a product of its internal values He begins with an historical overview of the major themes in NASA s history followed by chapters on specific areas of concentration such as the space station space transportation space science and internal reforms He also discusses the long term future of the agency and human space flight in general both domestically and internationally

Project Mercury Charles River,2021-03-02 Includes pictures Includes a bibliography for further reading We re not up there in space just to joyride around We re up there to do things that are of value to everybody right here on Earth John Glenn Today the Space Race is widely viewed poignantly and fondly as a race to the Moon that culminated with Apollo 11 winning the Race for the United States In fact it encompassed a much broader range of competition between the Soviet Union and the United States that affected everything from military technology to successfully launching satellites that could land on Mars or orbit other planets in the Solar System Moreover the notion that America won the Space Race at the end of the 1960s overlooks just how competitive the Space Race actually was in launching people into orbit as well as the major contributions the Space Race influenced in leading to today s International Space Station and continued space exploration The successful Apollo 11 mission was certainly an astonishing technological triumph but what is less well remembered now are that many programs preceded Apollo and were essential to its success Project Mercury was one of those and in many ways it represented the greatest step forward in terms of the conquest of space Before Project Mercury there was no certainty that a human could survive the rigors of a space launch or live outside Earth s atmosphere There was no agreement on just what an astronaut should be and various individuals involved debated whether they should be pilots technicians scientists or even merely observers in an automated craft Before Project Mercury no one was entirely certain what a rocket capable of taking a person into space would look like or even whether building such a craft was within the capabilities of engineering in the 1950s Put simply Project Mercury aimed to answer these and other questions while overcoming technological and human problems never before faced All the while the program took place against he backdrop of intense competition between the Soviets and the United States to be the first to be able to send people into space and if possible to use that for military advantage Because of this Project Mercury was not just a step into the unknown but part of an ongoing battle taking place in the glare of constant publicity to allow America to catch up with what frequently looked like an unassailable lead in space by the USSR Project Mercury lasted for less than five years but the missions were some of the most momentous and intense years in the history of space flight When Project Mercury began in October 1958 no person had traveled to space and some people still believed that this was impossible By the time that it ended in June 1963 the Apollo

Program that would place an American on the Moon in 1969 had begun but without Project Mercury there could have been no Apollo Program Project Mercury The History and Legacy of America's First Human Spaceflight Program examines the origins behind the missions the people and spacecraft involved and the historic results Along with pictures of important people places and events you will learn about Mercury like never before *Space, a Vital Stimulus to Our National Well-being* Gayle Lynwood May, 1994
