The Grand Wheel Barrington J. Bayley, 2011-09-29 When empires hung on the turn of a card Cheyne Scarne was a gambler a lucky one What he didn't know about randomness wasn't worth knowing He had brains to get right to the heart of the Grand Wheel the syndicate that controlled all illegal activity in the planets under human control But what Scarne had staked to get that far was chickenfeed compared to what he would risk to get into the real big time the massive intergalactic combine that dwarfed the empires of mere men For Scarne double crossing at every deal had laid his life on the line to win a game where no one knew the value of the cards and the rules changed with every trick *Beating the Wheel* Russell T. Barnhart, 1992 With 170 wheels in Las Vegas 144 in Atlantic City thousands in Europe and hundreds in the Far East roulette is undoubtedly the world's most popular casino game But can the game be beaten except by luck Yes says Russell Barnhart an expert in gambling strategies and a roulette winner far more than thirty years In *Beating the Wheel* he shares his valuable strategy

Paradoxes of Gambling Behaviour Willem A. Wagenaar, 2016-10-14 Why does a large proportion of the population engage in some form of gambling although they know they are most likely to lose and that the gambling industry makes huge profits Do gamblers simply accept their losses as fate or do they believe that they will be able to overcome the negative odds in some miraculous way The paradox is complicated by the fact that those habitual gamblers who are most aware that systematic losses cannot be avoided are the least likely to stop gambling Detailed analyses of actual gambling behaviour have shown gamblers to be victims of a variety of cognitive illusions which lead them to believe that the general statistical rules of determining the probability of loss do not apply to them as individuals The designers of gambling games cleverly exploit these illusions in order to promote a false perception of the situation Much of the earlier interest in gambling behaviour has been centred on the traditional theories of human decision making where decisions are portrayed as choices among bets This led to a tradition of studying decision making in experiments on betting In this title originally published in 1988 the author argues that betting behaviour should not be used as a typical example of human decision making upon which a general psychological theory could be founded and that these traditional views can in no way account for the gambling behaviour reported in this book
