Giabbanelli, Gonzalo Nápoles, 2024-01-29 This book starts with the rationale for creating an FCM by contrast to other techniques for participatory modeling as this rationale is a key element to justify the adoption of techniques in a research paper Fuzzy cognitive mapping is an active research field with over 20 000 publications devoted to externalizing the qualitative perspectives or mental models of individuals and groups Since the emergence of fuzzy cognitive maps FCMs back in the 80s new algorithms have been developed to reduce bias facilitate the externalization process or efficiently utilize quantitative data via machine learning It covers the development of an FCM with participants through a traditional in person setting drawing from the experience of practitioners and highlighting solutions to commonly encountered challenges The book continues with introducing principles of simulations with FCMs as a tool to perform what if scenario analysis while extending those principles to more elaborated simulation scenarios where FCMs and agent based modeling are combined Once an FCM model is obtained the book then details the analytical tools available for practitioners e g to identify the most important factors and provides examples to aid in the interpretation of results The discussion concerning relevant extensions is equally pertinent which are devoted to increasing the expressiveness of the FCM formalism in problems involving uncertainty The last four chapters focus on building FCM models from historical data These models are typically needed when facing multi output prediction or pattern classification problems In that regard the book smoothly guides the reader from simple approaches to more elaborated algorithms symbolizing the noticeable progress of this field in the last 35 years Problems recent references and functional codes are included in each chapter to provide

practice and support further learning from practitioners and researchers      The Semantics of Relationships R. Green,C.A. Bean,Sung Hyon Myaeng,2013-04-18 The genesis of this volume was the participation of the editors in an ACMISIGIR Association for Computing Machinery Special Interest Group on Information Retrieval workshop entitled Beyond Word Relations Hetzler 1997 This workshop examined a number of relationship types with significance for information retrieval beyond the conventional topic matching relationship From this shared participation came the idea for an edited volume on relationships with chapters to be solicited from researchers and practitioners throughout the world Ultimately one volume became two volumes The first volume Relationships in the Organization of Knowledge Bean Green 200 I examines the role of relationships in knowledge organization theory and practice with emphasis given to thesaural relationships and integration across systems languages cultures and disciplines This second volume examines relationships in a broader array of contexts The two volumes should be seen as companions each informing the other As with the companion volume we are especially grateful to the authors who willingly accepted challenges of space and time to produce chapters that summarize extensive bodies of research The value of the volume clearly resides in the quality of the individual chapters In naming this volume The Semantics of Relationships An Interdisciplinary Perspective we wanted to highlight the fact that relationships are not just empty connectives Relationships constitute important conceptual units and make significant contributions to meaning
