Neuro-cognitive Architecture of Numerical Cognition and Its Development Elise Klein, Korbinian Moeller, Reuven Babai, Anja Ischebeck, 2021-06-29 **Numerical Development - From cognitive functions to neural underpinnings** Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24

Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers Numerical BASIC Bruce Powel Douglass, 1983 Processing Symbolic Numerical Information and its Implications for Mathematics Learning Ricardo Moura, Julia Bahnmüller, Vitor Geraldi Haase, Júlia Beatriz Lopes-Silva, Korbinian Moeller, 2022-06-21 **Towards an Understanding of the Relationship between Spatial Processing Ability and Numerical and Mathematical Cognition** Sharlene D. Robert S Siegler Robbie Case A Modern Classic About 15 years ago Robbie asked me what I thought of a talk we had just heard I indicated that I hadn't much liked it and noted several serious problems Robbie agreed with all of the criticisms but said that he nonetheless liked the talk because there was one good idea in it that he could use I agreed with him that the idea was a good one but it took me a while to understand the wisdom of his position If there's one useful idea in a talk then hearing it has been worthwhile even if the talk also has numerous deficiencies On that day and on many others talking with Robbie changed my thinking for the better Robbie Case was in many ways a classic developmental psychologist of the old school The depth and breadth of his theory the range of age groups populations and topics that he studied and his efforts to connect theory and application are all reminiscent of the greats of the past Baldwin Dewey Piaget Vygotsky and Bruner

The Energy Method, Stability, and Nonlinear Convection Brian Straughan, 2013-06-29 This book is a revised edition of my earlier book of the same title The current edition adopts the structure of the earlier version but is much changed The introduction now contains definitions of stability Chapters 2 to 4 explain stability and the energy method in more depth and new sections

dealing with porous media are provided Chapters 5 to 13 are revisions of those in the earlier edition However chapters 6 to 12 are substantially revised brought completely up to date and have much new material in Throughout the book new results are provided which are not available elsewhere Six new chapters 14 19 are provided dealing with topics of current interest These cover the topics of multi component convection diffusion convection in a compressible fluid convection with temperature dependent viscosity and thermal conductivity the subject of penetrative convection whereby part of the fluid layer can penetrate into another nonlinear stability in the oceans and finally in chapter 19 practical methods for solving numerically the eigenvalue problems which arise are presented The book presents convection studies in a variety of fluid and porous media contexts It should be accessible to a wide audience and begins at an elementary level Many new references are provided

Hydrodynamic Lubrication of Non-Newtonian Fluids Ping Huang, Qianqian Yang, 2022-09-10 Hydrodynamic Lubrication of Non Newtonian Fluids covers basic theory lubrication failure and numerical methods and procedures The title offers a feasible method for solving the hydrodynamic lubrication problem for non Newtonian fluids Whereas hydrodynamic lubrication in Newtonian fluids can be solved using the existing Reynolds equation hydrodynamic lubrication in non Newtonian fluid is much more difficult to solve because the non Newtonian constitutive equation is nonlinear Engineers and technicians working on non Newtonian fluid lubrication calculation and analysis will find this to be an invaluable reference on the latest thinking on hydrodynamic lubrication This book presents a unified solution to hydrodynamic lubrication in non Newtonian fluids proposing a flow separation method In addition the title gives methods and insights into viscosity in non Newtonian fluids the lubrication failure mechanism and fluid lubrication mechanism carrying capacity Offers a solution to hydrodynamic lubrication in non Newtonian fluids Covers a new separation method and sets up an integral differential equation towards a unified method Provides insights into the viscosity of non Newtonian fluids putting forward incremental and full viscosity as important concepts Analyzes the lubrication failure mechanism and fluid lubrication mechanism carrying capacity Presents researchers with a way of calculating and analyzing fluid dynamic pressure lubrication flap lubrication and hot bounce lubrication of common non Newtonian fluids

Approximate Number System and Mathematics Jingguang Li,Xinlin Zhou,Marcus Lindskog,2019-11-25 Humans process quantity information without the aid of language or symbols to guide a variety of everyday life decisions The cognitive system that supports this intuitive skill is often referred to as the approximate number system ANS It has been argued that the ANS serves as the foundation of the formal symbolic number system mathematics Abundant empirical evidence is supportive of this view acuity of the ANS is positively correlated with symbolic math performance training of the ANS may cause improvements in symbolic math performance and the ANS and symbolic number processing may share a common neural underpinning However recently several theories and empirical data cast doubt on the role of the ANS in symbolic math processing This e book aims to advance our understanding of the underlying mechanisms of the overlap between the ANS and mathematics
