Numerical Ship Hydrodynamics Second International Conference:

The Proceedings John V. Wehausen, Nils Salvesen, 1977 **Second International Conference on Numerical Ship Hydrodynamics**, 1977 *Twenty-Second Symposium on Naval Hydrodynamics* National Research Council, Naval Surface Warfare Center, Carderock Division, Office of Naval Research, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Naval Studies Board, 2000-03-02 The Twenty Second Symposium on Naval Hydrodynamics was held in Washington D C from August 9 14 1998 It coincided with the 100th anniversary of the David Taylor Model Basin This international symposium was organized jointly by the Office of Naval Research Mechanics and Energy Conversion S T Division the National Research Council Naval Studies Board and the Naval Surface Warfare Center Carderock Division David Taylor Model Basin This biennial symposium promotes the technical exchange of naval research developments of common interest to all the countries of the world The forum encourages both formal and informal discussion of the presented papers and the occasion provides an opportunity for direct communication between international peers

Mathematical Modeling of Inland Vessel Maneuverability Considering Rudder Hydrodynamics Jialun Liu, 2020-05-11 This book demonstrates that different rudder configurations have different hydrodynamic characteristics which are influenced by the profile the parameters and the specific configuration The author proposes new regression formulas to help naval architects quickly estimate the rudder induced forces and moments in maneuvering Furthermore the author proposes and validates an integrated maneuvering model for both seagoing ships and inland vessels Using the proposed regression formulas and maneuvering model the specific impacts of rudder configurations on inland vessel maneuverability are studied In turn the book demonstrates the application of Reynolds Averaged Navier Stokes RANS simulations to obtain rudder hydrodynamic characteristics and the integration of the RANS results into maneuvering models as an accurate estimation of rudder forces and moments needed to quantify the impacts of rudder configurations on ships maneuvering performance In addition the author proposes new criteria for the prediction and evaluation of inland vessel maneuverability Simulations of ships with various rudder configurations are presented in order to analyze the impacts of rudder configurations on ship maneuverability in different classic and proposed test maneuvers Offering essential guidance on the effects of rudders for inland vessel maneuverability and helping practical engineers make informed design choices the book is of interest to researchers and academics in the field of naval engineering as well as students of naval architecture Industrial practitioners working on ship design may also find it beneficial **Twenty-Fourth Symposium on Naval Hydrodynamics** National Research Council, Office of Naval Research, West Japan Society of Naval Architects, Division on Engineering and Physical Sciences, Naval Studies Board, 2003-11-15 This report is part of a series of reports that summarize this regular event The report discusses research developments in ship design construction and operation in a forum that encouraged both formal and informal discussion of presented papers **Twenty-First Symposium on Naval**
