

Chapter 4 nutrition weight control and exercise

What is Nutrition?

Food is a mixture of various substances, which are essential for life, whereas nutrition is a dynamic process in which body is made healthy by the consumption of food. The process of nourishing, especially the process by which a living organisms uses food for the growth of tissues is called nutrition.

Dietary goals

1. to maintain ideal body weight by performing exercise.
2. To ensure an adequate nutritional status for pregnant mothers.
3. To achieve adequacy in all nutrients.
4. To prevent the chronic diet related disorders.
5. To maintain health and increase the life expectancy.
6. To increase the awareness and effect of diet and physical activity.
7. To reduce sugar consumption.
8. To strengthen the action plans to improve diets.

Basics of a nutritious diet

Protein- the maximum amount of protein remains in the tissues of our body. If water is extracted from the body, the maximum percentage of protein is left out in our body. The growth and development does not take place properly if there is lack of protein. Body weight starts reducing, mental growth is also hindered. Protein stimulates metabolism and also forms some of the digestive juices.

Sources of protein

- a) **Animal protein-** protein which we get from animals such as egg, milk, meat, fish.

Weight Management Dr. Balbinder Singh, 2020-09-03 The field of sports nutrition is a dynamic one Core competencies in exercise physiology psychology integrated metabolism and biochemistry are the initial parameters for a successful career in sports nutrition In addition to the academic fundamentals it is imperative that the sports nutritionist understand the sport in which our client participates This sport specific understanding should manifest itself in fuel utilization mechanics of movement as well as psychological processes that motivate the participant to perform optimally Sports nutrition is a broad interdisciplinary field that involves dietitians biochemists exercise physiologists cell and molecular biologists and occasionally psychotherapists It has both a basic science aspect that includes such concerns as understanding the body's use of nutrients during athletic competition and the need for nutritional supplements among athletes and an application aspect which is concerned with the use of proper nutrition and dietary supplements to enhance an athlete's performance The psychological or psychiatric dimension of sports nutrition is concerned with eating and other mental disorders related to nutrition among athletes Nutrition is the process of consuming absorbing and using nutrients needed by the body for growth development and the maintenance of life nutrients are chemical substances in foods that nourish the body The present book entitled Sports Nutrition discusses in detail all the essential and relevant aspects involved in sports nutrition Weight management refers to a set of practices and behaviors that are necessary to keep one's weight at a healthful level It is

preferred to the term dieting because it involves more than regulation of food intake or treatment of overweight people. People diagnosed with eating disorders who are not obese or overweight still need to practice weight management. Some health care professionals use the term nutritional disorders to cover all disorders related to weight. The purpose of weight management is to help each patient achieve and stay at the best weight possible in the context of overall health, occupation, and living situation. A second purpose is the prevention and treatment of diseases and disorders associated with obesity or with eating disorders. These disorders include depression and other psychiatric disturbances in addition to the physical problems associated with nutritional disorders. Good nutrition is vital to successful weight loss and management and for good health. Several benefits of good nutrition are improvement in cholesterol, reduction of blood pressure, and increase in overall energy. Many of us have tried one or more of the many fad diets or in the past have experienced the vicious cycle of unhealthy weight loss, weight regain. Some of the popular diets suggest eliminating certain food groups while others suggest taking mega doses of vitamins.
