P-adic Analysis And Mathematical Physics:

P-adic Analysis And Mathematical Physics V S Vladimirov, I V Volovich, E I Zelenov, 1994-04-28 p-adic numbers play a very important role in modern number theory algebraic geometry and representation theory. Lately p-adic numbers have attracted a great deal of attention in modern theoretical physics as a promising new approach for describing the non-Archimedean geometry of space-time at small distances. This is the first book to deal with applications of p-adic numbers in theoretical and mathematical physics. It gives an elementary and thoroughly written introduction to p-adic numbers and p-adic analysis with great numbers of examples as well as applications of p-adic numbers in classical mechanics dynamical systems quantum mechanics statistical physics quantum field theory and string theory. **p-Adic Valued Distributions in Mathematical Physics** Andrei Y. Khrennikov, 2013-03-09 Numbers natural rational real complex p-adic. What do you know about p-adic numbers? Probably you have never used any p-adic nonrational number before now. I was in the same situation few years ago. p-adic numbers were considered as an exotic part of pure mathematics without any application. I have also used only real and complex numbers in my investigations in functional analysis and its applications to the quantum field theory and I was sure that these number fields can be a basis of every physical model generated by nature. But recently new models of the quantum physics were proposed on the basis of p-adic numbers field \mathbb{Q}_p . What are p-adic numbers? p-adic analysis p-adic physics p-adic probability p-adic numbers were introduced by K Hensel 1904 in connection with problems of the pure theory of numbers. The construction of \mathbb{Q}_p is very similar to the construction of \mathbb{R} is a fixed prime number $p \neq 2, 3, 5, 127$. Both these number fields are completions of the field of rational numbers \mathbb{Q} . But another valuation $|\cdot|_p$ is introduced on \mathbb{Q} instead of the usual real valuation $|\cdot|$. We get an infinite sequence of non isomorphic completions of \mathbb{Q} : $\mathbb{Q}_2, \mathbb{Q}_3, \mathbb{Q}_{127}, \mathbb{R}, \mathbb{Q}_0$. These fields are the only possibilities to complete \mathbb{Q} according to the famous theorem of Ostrowsky. **p-Adic Valued Distributions in Mathematical Physics** Andrei Y. Khrennikov, 2013-06-29 In this book we develop various mathematical models of information dynamics I dynamics including the process of thinking based on methods of classical and quantum physics The main aim of our investigations is to describe mathematically the phenomenon of consciousness We would like to realize a kind of Newton Descartes program corrected by the lessons of statistical and quantum mechanics for information processes Starting from the ideas of Newton and Descartes in physics there was developed an adequate description of the dynamics of material systems We would like to develop an analogous mathematical formalism for information and in particular mental processes At the beginning of the 21st century it is clear that it would be impossible to create a deterministic model for general information processes A deterministic model has to be completed by a corresponding statistical model of information flows and in particular flows of minds It might be that such an information statistical model should have a quantum like structure *Local Fields and Their Extensions: Second Edition*
