Colour in Art, Design & Nature C. A. Brebbia, C. Greated, M. W. Collins, 2011 This book is ambitiously interdisciplinary and may be divided into four main sections defined in terms of the authors themselves Firstly there are two contributions by biologists Secondly the largest section is by practising artists Thirdly there are two engineering based contributions Finally two contributions address some of the historical proponents of colour theory and art These eleven works in full colour form a striking contribution to the commonwealth of colour studies and to a possible unification of Snow's two cultures Colour and inter disciplinaryity go hand in hand This so often involves the authors leaving the comfort zone of their original speciality and striving for excellence in another The personal story of Franziska Schenk is but one good example It seems that our perceptions of aesthetics and beauty must be very flexible indeed as to find absolute opposites equally fascinating If so it goes to show how wonderful are the construction and operation of the human brain Does psychology win in the end Does colour lead to a single culture

Alvarez, Ana M. Franco, 2018-09-27 This edited volume examines the history of abstract art across Latin America after 1945. This form of art grew in popularity across the Americas in the postwar period often serving to affirm a sense of being modern and the right of Latin America to assume the leading role Europe had played before World War II. Latin American artists practiced gestural and geometric abstraction though the history of art has favored the latter. Recent scholarship for instance has focused on geometric abstraction from Argentina, Brazil and Venezuela. The book aims to expand the map and consider this phenomenon as it developed in neglected regions such as Central America and the Andes investigating how this style came to stand in for Latin American contemporary art. **David Maxim** David Maxim, 2005 *Creating Art for All Ages*

The author, both a psychologist and artist, offers up a unique merger and perspective of these fields. Through the production of fine art which is directly informed by neuroscientific and optical processes, this volume aims to fill a gap in the literature and understanding of the creation and perception of the grid image created as a work of art. The grid image is employed for reasons discussed in the text to illustrate more general processes associated with the integration of vision, visual distortion and painting. Existing at the intersection of perceptual neuroscience, psychology, fine art and art history, this volume concerns the act of painting and the process of looking. More specifically, the book examines vision and the effects of visual impairment and how these can be interpreted through painting within a theoretical framework of visual neuroscience.
