## **Palaeogeography Of The Midlands:**

**The Palaeogeography of the Midlands** Leonard Johnston Wills, 1952     In the Shadow of the Dinosaurs Nicholas C. Fraser, Hans-Dieter Sues, 1997-08-28 The early Mesozoic period was a critical period in the evolution of life on land when most of today's major groups of terrestrial vertebrates arose and dinosaurs and pterosaurs rose to prominence. In recent years this period has received a great deal of attention from palaeontologists and it is now felt that the small vertebrates which lived in the shadows of the first dinosaurs tell us a great deal about the evolution of modern terrestrial ecosystems. This book is an attempt to collate all the information on the small vertebrates and features contributions by experts with international reputations in their fields. There are chapters on the taxonomy and phylogeny of the key vertebrate groups followed by a section dealing with the most significant fossiliferous assemblages worldwide. The final section looks at how faunal turnover at this time is measured and examines the possibility of mass extinctions.

**The Paleogeography of the Midlands** Leonard Johnston Wills, 1948     *Correlation of the Silurian Rocks of the British Isles* Alfred M. Ziegler, R. B. Rickards, W. S. McKerrow, 1974-01-01     *The Palaeogeography of the Midlands ... 5 Plates and 38 Text Illustrations* Leonard Johnston Wills, 1948     *Heavy Minerals in Use* Maria A. Mange, David T. Wright, 2007-09-10 The book is structured thematically encompassing principles, processes and products, practice and applications. Discussion of processes that control heavy mineral assemblages throughout the rock cycle are presented by leading experts whose key note works are followed by specialist case studies. Each work also provides details on the geology of the study area, techniques and data treatment. The high number of contributions represent the collective experience and wisdom of generations of geologists and provide an invaluable source of references to works carried out in many parts of the world. Presents a unique and authoritative resource of immediate relevance and practical use to the researcher and applied geologist. Contains case studies demonstrating the broad range of applications of heavy minerals in a variety of modern and ancient geological settings and in resource exploration. Includes examples of geological problems from employing heavy mineral analysis and establishing criteria that can be applied before deciding to undertake a study.

*The Geology of the East Midlands* Peter Colley, Sylvester-Bradley, Trevor David Ford, 1968 Distributed in North America by Humanities Press Inc New York     **Nottingham and Its Region** British Association for the Advancement of Science, 1966     **Early Palaeozoic Biogeography and Palaeogeography** D.A.T. Harper, T. Servais, 2014-01-27 The Early Palaeozoic was a critical interval in the evolution of marine life on our planet. Through a window of some 120 million years the Cambrian Explosion, Great Ordovician Biodiversification Event, End Ordovician Extinction and the subsequent Silurian Recovery established a steep trajectory of increasing marine biodiversity that started in the Late Proterozoic and continued into the Devonian. Biogeography is a key property of virtually all organisms; their distributional ranges mapped out on a mosaic of changing palaeogeography have played important roles in modulating the diversity and evolution of marine life. This Memoir first introduces the content, some

of the concepts involved in describing and interpreting palaeobiogeography and the changing Early Palaeozoic geography is illustrated through a series of time slices The subsequent 26 chapters compiled by some 130 authors from over 20 countries describe and analyse distributional and in many cases diversity data for all the major biotic groups plotted on current palaeogeographic maps Nearly a quarter of a century after the publication of the Green Book Geological Society London Memoir<sup>12</sup> edited by McKerrow and Scotese improved stratigraphic and taxonomic data together with more accurate digitized palaeogeographic maps have confirmed the central role of palaeobiogeography in understanding the evolution of Early Palaeozoic ecosystems and their biotas

*Quaternary of the Trent* David R. Bridgland, Andy Howard, Mark J. White, Tom S. White, 2014-03-31 This volume is an integrated overview and synthesis of available data relating to the Quaternary evolution of the River Trent It provides detailed descriptions of the Pleistocene sedimentary records from the Trent its tributaries and related drainage systems a sedimentary record that spans a period of approximately half a million years and the biostratigraphical and archaeological material preserved therein Significant new data are presented from recently discovered sites of geological and archaeological importance including previously unrecognised fluvial deposits as well as novel analyses such as mathematical modelling of fluvial incision as recorded by the river terrace deposits In combination with a thorough review of the literature on the Trent these new data have contributed to revised chronostratigraphical and palaeogeographical frameworks for central England and revealed the complexity of the Pleistocene fluvial and glacial records in this region The fragmentary Trent terrace sequence is an important element of wider reconstructions of Pleistocene palaeodrainage in Britain providing a link between the records preserved in the English Midlands and those in East Anglia
