The hominin branch of the primate tree includes species that coexisted

**Paleoanthropology** is the study of human origins and evolution, the brief history since the divergence of human and chimpanzee lineages.

Paleoanthropologists have unearthed about 20 species of extinct hominins, species that are more closely related to humans than to chimpanzees, and thousands of hominin fossils.

The oldest hominin yet discovered, *Sahelanthropus tchadensis*, lived about 7 to 6 million years ago.

The fossil record suggests that hominin diversity increased dramatically between 4 to 2 million years ago.
