Pattern Formation In Biology, Vision And Dynamics Alessandra Carbone, Misha Gromov, Przemyslaw Prusinkiewicz, 2000-04-11 Half a billion years of evolution have turned the eye into an unbelievable pattern detector Everything we perceive comes in delightful multicolored forms Now in the age of science we want to comprehend what and why we see Two dozen outstanding biologists chemists physicists psychologists computer scientists and mathematicians met at the Institut d Hautes Etudes Scientifiques in Bures sur Yvette France They expounded their views on the physical biological and physiological mechanisms creating the tapestry of patterns we see in molecules plants insects seashells and even the human brain This volume comprises surveys of different aspects of pattern formation and recognition and is aimed at the scientifically minded reader

Mathematical Modelling in Plant Biology Richard J. Morris, 2018-11-05 Progress in plant biology relies on the quantification analysis and mathematical modeling of data over different time and length scales This book describes common mathematical and computational approaches as well as some carefully chosen case studies that demonstrate the use of these techniques to solve problems at the forefront of plant biology Each chapter is written by an expert in field with the goal of conveying concepts whilst at the same time providing sufficient background and links to available software for readers to rapidly build their own models and run their own simulations This book is aimed at postgraduate students and researchers working the field of plant systems biology and synthetic biology but will also be a useful reference for anyone wanting to get into quantitative plant biology

New Trends in the Physics and Mechanics of Biological Systems Martine Ben Amar, Alain Goriely, Martin Michael Müller, Leticia Cugliandolo, 2011-05-26 In July 2009 many experts in the mathematical modelling of biological sciences gathered in Les Houches for a 4 week summer school on the mechanics and physics of biological systems The goal of the school was to present to students and researchers an integrated view of new trends and challenges in physical and mathematical aspects of biomechanics While the scope for such a topic is very wide we focused on problems where solid and fluid mechanics play a central role The school covered both the general mathematical theory of mechanical biology in the context of continuum mechanics but also the specific modelling of particular systems in the biology of the cell plants microbes and in physiology These lecture notes are

organised as was the school around five different main topics all connected by the common theme of continuum modelling for biological systems Bio fluidics Bio gels Bio mechanics Bio membranes and Morphogenesis These notes are not meant as a journal review of the topic but rather as a gentle tutorial introduction to the readers who want to understand the basic problematic in modelling biological systems from a mechanics perspective

Science Bertrand Zavidovique, Giosuè Lo Bosco, 2012 The book gathers articles that were exposed during the seventh edition of the Workshop Data Analysis in Astronomy It illustrates a current trend to search for common expressions or models transcending usual disciplines possibly associated with some lack in the Mathematics required to model complex systems In that data analysis would be at the epicentre and a key facilitator of some current integrative phase of Science It is all devoted to the question of representation in Science whence its name IMAGE IN ACTION and main thrusts Part A Information data organization and communication Part B System structure and behaviour Part C Data System representation Such a classification makes concepts as complexity or dynamics appear like transverse notions a measure among others or a dimensional feature among others Part A broadly discusses a dialogue between experiments and information be information extracted from or brought to experiments The concept is fundamental in statistics and tailors to the emergence of collective behaviours Communication then asks for uncertainty considerations noise indeterminacy or approximation and its wider impact on the couple perception action Clustering being all about uncertainty handling data set representation appears not to be the only solution Introducing hierarchies with adapted metrics a priori pre improving the data resolution are other methods in need of evaluation The technology together with increasing semantics enables to involve synthetic data as simulation results for the multiplication of sources Part B plays with another couple important for complex systems state vs transition State first descriptions would characterize physics while transition first would fit biology That could stem from life producing dynamical systems in essence Uncertainty joining causality here geometry can bring answers stable patterns in

the state space involve constraints from some dynamics consistency Stable patterns of activity characterize biological systems too In the living world the complexity i e a global measure on both states and transitions increases with consciousness this might be a principle of evolution Beside geometry or measures operators and topology have supporters for reporting on dynamical systems Eventually targeting universality the category theory of topological thermodynamics is proposed as a foundation of dynamical system understanding Part C details examples of actual data system relations in regards to explicit applications and experiments It shows how pure computer display and animation techniques link models and representations to reality in some concrete virtual manner Such techniques are inspired from artificial life with no connection to physical biological or physiological phenomena The Virtual Observatory is the second illustration of the evidence that simulation helps Science not only in giving access to more flexible parameter variability but also due to the associated data and method storing capabilities It fosters interoperability statistics on bulky corpuses efficient data mining possibly through the web etc in short a reuse of resources in general including novel ideas and competencies Other examples deal more classically with inverse modelling and reconstruction involving Bayesian techniques or chaos but also fractal and symmetry
