**Bioavailability of Organic Xenobiotics in the Environment** P. Baveye, J.-C. Block, V.V. Goncharuk, 2013-03-14 In the continuing fight against organic environmental xenobiotics the initial success attributed to bioremediation has paled in part due to the low availability of xenobiotics entrapped within a soil or sediment matrix This has generated a very significant wave of interest in the bioavailability issue However much experimental evidence is puzzling or contradictory mechanistic theories are embryonic and implications for the practice of bioremediation or concerning the natural fate of xenobiotics are still tentative The debate in Europe and the USA is vigorous Eastern Europe following the liberalisation of the economy and political life is evolving in a similar direction In many cases however limited access to literature sources severe language barriers and the lack of a strong pluridisciplinary tradition are hampering the adoption of state of the art techniques Originally intended to allow scientists in East European countries to become acquainted with the key aspects of the bioavailability debate that is unfolding in the scientific literature in the West and with its implications for bioremediation efforts the present book presents a very complete coverage of the theoretical and practical aspects of the limited bioavailability of organic xenobiotics in the environment

Somasundaran,2006      **Bioavailability of Contaminants in Soils and Sediments** National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Bioavailability of Contaminants in Soils and Sediments,2003-04-03 Bioavailability refers to the extent to which humans and ecological receptors are exposed to contaminants in soil or sediment The concept of bioavailability has recently piqued the interest of the hazardous waste industry as an important consideration in deciding how much waste to clean up The rationale is that if contaminants in soil and sediment are not bioavailable then more contaminant mass can be left in place without creating additional risk A new NRC report notes that the potential for the consideration of bioavailability to influence decision making is greatest where certain chemical environmental and regulatory factors align The current use of bioavailability in risk assessment and hazardous waste cleanup regulations is demystified and acceptable tools and models for bioavailability assessment are discussed and ranked according to seven criteria Finally the intimate link between bioavailability and bioremediation is explored The report concludes with suggestions for moving bioavailability forward in the regulatory arena for both soil and sediment cleanup      **Soil Solution Chemistry, Mineral Weathering, and Pedogenesis in Sandy Outwash Soils of East-Central Minnesota** Rachid Bouabid,1992
