Recombinant Lymphokines And Their Receptors:

Recombinant Lymphokines and Their Receptors Steven Gillis, 1987 **Peptide Growth Factors and Their Receptors I** Michael B. Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone person to stay informed on this subject by reading the primary literature At the same time it is becoming increasingly apparent that these of universal importance in biology and medicine and that the substances are original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a com mon language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research This treatise is divided into four main sections After three introductory chapters its principal focus is the detailed description of each of the major peptide growth factors in 26 individual chapters **Lipoproteins as Carriers of Pharmacological Agents** Michael Shaw, 1991-06-21 Explores endogenous lipoprotein particles and their interaction with pharmacological agents Among the topics are receptor dependent interactions of lipoproteins with tissues and cell types their uptake and transport with the vascular endothelium therapeutic and chemical agents that associate in v *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1988 *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 *Interferon and Nonviral Pathogens* G. I. Bryne, 2021-05-30 This book explores the important role of the interferons in infections due to nonviral intracellular pathogens It deals with the induction of interferons by a variety of intracellular microorganisms and the effects of interferons on the host cells and the microorganisms *The Lymphocyte* Marchalonis, 1987-11-24 **Human Immunogenetics** S. D. Litwin, 2020-10-28 Delineating fundamental concepts of contemporary immunogenetics this reference text examines specific immunogenetic systems in terms of molecular biochemistry and immunophysiology Covers material in diverse fields including infectious diseases cell biology virology molecular genetics Comprise *Immunodiagnosis of Cancer* M.d d., 2017-11-22 Updated to reflect changes in the field since publication of the first edition in 1979 Provides a detailed review of the methodology available for assessing the diagnosis and prognosis of cancer patients including data on the application of tumor marker assays and other immunodiagnostic procedures *Epidermal Langerhans Cells* Gerold Schuler, 2024-12-20 *Epidermal Langerhans Cells* focuses on epidermal Langerhans cells LCs and the important role they play in the induction of contact hypersensitivity and graft rejection This in depth work discusses how these antigen presenting cells are modulated

by various physicochemical agents such as UV light and how they can be infected by the AIDS virus It also reveals that cytokines mediate their development into potent T cell stimulatory dendritic cells This comprehensive review covers important experimental details and methods and fascinating information on LCs It also provides an overview of the immune system as it relates to the skin in health and disease This up to date publication is an indispensable resource for all investigative and clinical dermatologists as well as immunologists interested in antigen presenting cells **Systemic**

Autoimmunity P. E. Bigazzi,1991-08-30 Surveys the biotechnologically influenced advances in the understanding of systemic autoimmune disorders highlighting recent research using cell biology and biochemistry the cloning of immune cells recombinant DNA and molecular genetics Among the topics are the role of complement in inflammation **Adoptive**

Cellular Immunotherapy of Cancer H. C. Stevenson,2021-05-30 This volume presents the most complicated and powerful cancer biotherapies developed It provides an overview of human immune system function and the mechanisms by which adoptive cellular immunotherapies ACI harnesses the activity The volume provides a vision on the developments in ACI

Peptide and Protein Drug Delivery Vincent Lee,2024-11-01 This reference text covers fundamentals of peptide and protein drug delivery including such considerations as synthesis physical chemistry and biochemistry analysis proteolytic and transport constraints pharmacokinetics and pharmacodynamics bioavailability from routes of administration detail

Peptide Growth Factors and Their Receptors II Michael B. Sporn,Anita B. Roberts,2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone to stay informed on this subject by reading the possible for At the same time it is becoming increasingly apparent that primary literature these substances are of universal importance in biology and medicine and that the original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artificial they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research Molecular Genetics of Inflammatory Bowel Disease

Mauro D'Amato,John D Rioux,2013-10-05 Research in Crohn's disease CD and ulcerative colitis UC together known as the inflammatory bowel diseases IBD has truly seen a revolution in the last 5-10 years This book examines how these genetic discoveries have led to the identification of biological functions not previously associated with IBD pathophysiology e.g. autophagy how multiple genetic risk factors for IBD converge on given biological functions and that together the identified variants in these genes have predisposing and protective roles e.g. the multiple variants in the receptor for the IL23 cytokine

and its signaling cascade and how having such a large number of known genetic risk factors has changed our understanding not only about the genetic and molecular overlap between CD and UC but also between these diseases and other chronic inflammatory diseases e g psoriasis multiple sclerosis type 1 diabetes and many others **Progress in Immunology VI** B Cinader, Richard G. Miller, 2014-05-10 Progress in Immunology VI Sixth International Congress of Immunology contains the proceedings of the Sixth International Congress of Immunology held in 1986 The papers review advances that have been made in the field of immunology and cover topics ranging from ontogeny and differentiation of B and T lymphocytes to diversification of immunoglobulins and T cell receptors Antigen presentation and processing the complement system and regulation of the immune response are also discussed Comprised of 105 chapters this book first explores the developmental biology of the immune system by focusing on the origins of selective theories of antibody formation and the clonal selection hypothesis Clonal selection and the problem of immunologic tolerance are also considered Subsequent chapters deal with the structure and function of recognition structures B cell subsets and B cell activation T cell subsets and T cell activation lymphokines and growth factors and autoimmune disorders The remaining sections are devoted to oncogenesis and tumor immunity the response of the host to the environment and host graft relationship This monograph will be of interest to immunologists and biologists **Cytokines in Animal Health and Disease** Michael J. Myers, Michael P. Murtaugh, 2020-08-26 This work offers comprehensive up to date coverage of cytokine biology in veterinary and agricultural species describing the role of cytokines in physiological and pathological processes It addresses recent advances and new information on the function of cytokines in reproduction detoxification of xenobiotics growth modulation and other areas and discusses the approaches to and pitfalls of studying cytokines in animals **Psychoneuroimmunology** Robert Ader, 2014-06-28 Psychoneuroimmunology Second Edition presents reports on the relationship between the nervous and immune systems The book is divided into four sections The first section details the role of neural structures and neurotransmitter signals in communication with the immune system It documents the extensive neural connections with organs of the immune system the dynamics of noradrenergic sympathetic innervation of spleen and thymus and the evidence for immune signaling of the CNS Part II elaborates the role of hormones in the modulation of immune functions the basis for bidirectional communication between the neuroendocrine and immune systems and the potential physiological implications of these neuroendocrine immune system interactions The third part addresses behavioral influences on immune response the effects of conditioning stress and social interactions in modulating immune responses and the behavioral consequences of experimentally altered or genetically determined immunologic states The final section presents the effects of psychosocial factors on immune responses and the potential impact of behavioral interventions in modulating immunity in healthy human subjects and in patients with AIDS Neuroscientists endocrinologists and immunologists will find the book interesting **Progress in Immunology** L. Nicklin, Fritz Melchers, E.D. Albert, H. v. Boehmer, M.P. Dierich, L. Du Pasquier, K. Eichmann, D. Gemsä, O.

Götze,J.R. Kalden,S.H.E. Kaufmann,H. Kirchner,K. Resch,G. Riethmüller,A. Schimpl,C. Sorg,M. Steinmetz,H. Wagner,H.G.
