understanding of plant morphology into modern research in plant genetics development and physiology As research on developmental genetics and plant evolution emerges an understanding of plant morphology is essential to interpret developmental and morphological data The principles of plant morphology are being brought into studies of crop development biodiversity and evolution during climate change and increasingly such researchers are turning to old texts to uncover information about historic research on plant morphology Hence there is great need for a modern reference and textbook that highlights past studies and provides the synthesis of data necessary to drive our future research in plant morphological and developmental evolution Key Features Numerous illustrations demonstrating the principles of plant morphology Historical context for interpretations of more recent genetic data Firmly rooted in the principles of studying plant form and function Provides evolutionary framework without relying on evolutionary interpretations for plant form Only synthetic treatment of plant morphology on the market Related Titles Les D H Aquatic Dicotyledons of North America Ecology Life History and Systematics ISBN 978 1 4822 2502 0 Les D H Aquatic Monotyledons of North America Ecology Life History and Systematics ISBN 978 1 1380 5493 6 Bowes B G Colour Atlas of Woody Plants and Trees ISBN 978 0 3674 7398 3 Bahadur B et al eds Asymmetry in Plants Biology of Handedness ISBN 978 1 1385 8794 6

Hamiltonian Systems with Three or More Degrees of Freedom Carles Simó, 2012-12-06 A survey of current knowledge about Hamiltonian systems with three or more degrees of freedom and related topics The Hamiltonian systems appearing in most of the applications are non integrable Hence methods to prove non integrability results are presented and the different meaning attributed to non integrability are discussed For systems near an integrable one it can be shown that under suitable conditions some parts of the integrable structure most of the invariant tori survive Many of the papers discuss near integrable systems From a topological point of view some singularities must appear in different problems either caustics geodesics moving wavefronts etc This is also related to singularities in the projections of invariant objects and can be used as a signature of these objects Hyperbolic dynamics appear as a source on unpredictable behaviour and several mechanisms of hyperbolicity are presented The destruction of tori leads to Aubrey Mather objects and this is touched on for a related class of systems Examples without periodic orbits are constructed against a classical conjecture Other topics concern higher dimensional systems either finite networks and localised vibrations on them or infinite like the quasiperiodic Schrödinger operator or nonlinear hyperbolic PDE displaying quasiperiodic solutions Most of the applications presented concern celestial mechanics problems like the asteroid problem the design of spacecraft orbits and methods to compute periodic solutions
