Longrun Dynamics:

Longrun Dynamics G. Snooks,1998-04-08 Longrun Dynamics is a ground breaking work that begins where the author's Economics without Time 1993 left off It employs the inductive method proposed by J S Mill to develop a general dynamic theory that integrates the separate disciplines of economic growth economic fluctuations and political decision making The central feature of this general theory is dynamic demand which provides both a realist form for the model and a new explanation of macroeconomics variables The general theory also provides an entirely new basis for policy and is designed to counter the influence of neo liberalism in economic theory

How Long is the Long Run? A Dynamic Analysis of the Spanish Business Cycle Ms.Stefania Fabrizio,Mr.Angel J. Ubide,J. Humberto Lopez,1997-06-01 This paper studies the sources of Spanish business cycles It assumes that Spanish output is affected by two types of shocks The first one has permanent long run effects on output and it is identified as a supply shock The second one has only transitory effects on output and it is identified as a demand shock Spain seems to have long business cycles of about 15 years As restrictive demand policies to control the inflation rate could prove painful and disappointing supply side policies aimed at reducing rigidities in the product and labor market would be a better way to achieve the same objective

The Ephemeral Civilization Graeme Snooks,2002-09-11 The Ephemeral Civilization is an astonishing intellectual feat in which Graeme Snooks develops an original and ground breaking analysis of changing sociopolitical forms over the past 3 000 years Snooks challenges the prevailing theories of social evolutionism with an innovative approach which also looks ahead to the twenty first century The Ephemeral Civilization builds on the model of dynamic strategy outlined in the author's highly acclaimed companion volume The Dynamic Society The Ephemeral Society is divided into three parts theory history and future

Global Transition Graeme Donald Snooks,1999-08-31 Global Transition is an innovative study that analyses the problems and prospects of the Third World by building on the theoretical contribution the dynamic strategy model made in the author's acclaimed Longrun Dynamics It formulates a general economic and political theory he calls the global strategic transition GST model The central feature of this model is the global strategic demand response mechanism involving an interaction between the world's expanding strategic core and its fringe which is facilitated through strategic inflation This model also provides the basis for a new policy approach to economic development
