Superconducting and Low-Temperature Particle Detectors G. Waysand, G. Chardin, 2012-12-02 As demonstrated by the contributions in this volume the domain of superconducting and low temperature devices is in a rapidly expanding phase Interactions between materials sciences low temperature physics astrophysics nuclear and particle physics have provided the incentive for new experiments which could ultimately record such rare interactions as double beta decay neutrino scattering or collisions of the elusive dark matter halo particles The theoretical and experimental improvements achieved during the last year have been impressive Detection of 60 keV resolution with a non zero spin material as a target seems therefore realizable in the near future Similarly impressive achievements on ballistic phonons detection and superheated superconducting detectors have been presented together with reliable techniques for developing ultra low noise electronics required by these ambitious experiments Apart from the contributions presented during the symposium the two original papers by Niinikoski proposing the use of bolometers as particle detectors have been included in this volume These papers despite their current interest have never been published before The comprehensive style of the papers will appeal to specialists and non specialists alike in particular solid state physicists will find the volume of considerable interest as the field of materials research continues to benefit from the type of work presented here **Scientific and Technical**

Nolas, 2024-10-11 This book is a comprehensive collection of the most influential papers on thermoelectricity published in the last two centuries Starting with the pioneering work of Volta Seebeck and Peltier on thermoelectric phenomena it takes the reader through a historical journey of articles and books that have shaped the field of thermoelectricity covering topics ranging from fundamental physics to novel materials The book is annotated by a team of distinguished researchers from around the world and includes English translations of the earliest research reports on thermoelectricity many of which have never been made available before This provides a unique opportunity to explore the scientific evolution of this groundbreaking discipline Whether you are a seasoned expert or a newcomer to the field this book

is an invaluable resource for understanding the rich history and current state of thermoelectricity research *Energy Research Abstracts*, 1983 **Superconducting Devices & Materials**, 1968 **Illinois Technograph**, 1952 NBS Monograph United States. National Bureau of Standards, 1961 **Polymer Properties at Room and Cryogenic Temperatures** Gunther Hartwig, 1995-01-31 Most descriptions of polymers start at room temperature and end at the melting point This textbook starts at very low temperatures and ends at room temperature At low temperatures many processes and relaxations are frozen which allows singular processes or separate relaxations to be studied At room temperatures or at the main glass transitions many processes overlap and the properties are determined by relaxations At low temperatures there are temperature ranges with negligible influences by glass transitions They can be used for investigating so called basic properties which arise from principles of solid state physics The chain structure of polymers however requires stringent modifications for establishing solid state physics of polymers Several processes which are specific of polymers occur only at low temperatures There are also technological aspects for considering polymers at low temperatures More and more applications of polymeric materials in low temperature technology appear Some examples are thermal and electrical insulations support elements for cryogenic devices low loss materials for high frequency equipments It is hoped that in addition to the scientific part a data collection in the appendix may help to apply polymers more intensively in low temperature technology The author greatly appreciates the contributions by his coworkers of the Kernforschungszentrum Karlsruhe in measurement and discussion of many data presented in the textbook and its appendix Fruitful discussions with the colleagues Prof H Baur Prof S Hunklinger Prof D Munz and Prof R **Report of NRL Progress** Naval Research Laboratory (U.S.), 1962
