Borba, 2021-05-24 This book adopts an interdisciplinary approach to investigate the development of mathematical reasoning in both children and adults and to show how understanding the learner's cognitive processes can help teachers develop better strategies to teach mathematics This contributed volume departs from the interdisciplinary field of psychology of mathematics education and brings together contributions by researchers from different fields and disciplines such as cognitive psychology neuroscience and mathematics education The chapters are presented in the light of the three instances that permeate the entire book the learner the teacher and the teaching and learning process Some of the chapters analyse the didactic challenges that teachers face in the classroom such as how to interpret students reasoning the use of digital technologies and their knowledge about mathematics Other chapters examine students opinions about mathematics and others analyse the ways in which students solve situations that involve basic and complex mathematical concepts The approaches adopted in the description and interpretation of the data obtained in the studies documented in this book point out the limits the development and the possibilities of students thinking and present didactic and cognitive perspectives to the learning scenarios in different school settings **Mathematical Reasoning of Children and Adults Teaching and Learning from an Interdisciplinary Perspective** will be a valuable resource for both mathematics teachers and researchers studying the development of mathematical reasoning in different fields such as mathematics education educational psychology cognitive psychology and developmental psychology **Mathematical Learning and Cognition in Early Childhood** Katherine M.

Linguistic

Influences on Mathematical Cognition Ann Dowker,Hans-Christoph Nuerk,2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing

symbols to guide a variety of everyday life decisions The cognitive system that supports this intuitive skill is often referred to as the approximate number system ANS It has been argued that the ANS serves as the foundation of the formal symbolic number system mathematics Abundant empirical evidence is supportive of this view acuity of the ANS is positively correlated with symbolic math performance training of the ANS may cause improvements in symbolic math performance and the ANS and symbolic number processing may share a common neural underpinning However recently several theories and empirical data cast doubt on the role of the ANS in symbolic math processing This e book aims to advance our understanding of the underlying mechanisms of the overlap between the ANS and mathematics

Continuous Issues in Numerical Cognition

Avishai Henik,2016-05-18 Continuous Issues in Numerical Cognition How Many or How Much re examines the widely accepted view that there exists a core numerical system within human beings and an innate ability to perceive and count discrete quantities This core knowledge involves the brain s intraparietal sulcus and a deficiency in this region has traditionally been thought to be the basis for arithmetic disability However new research findings suggest this wide agreement needs to be examined carefully and that perception of sizes and other non countable amounts may be the true precursors of numerical ability This cutting edge book examines the possibility that perception and evaluation of non countable dimensions may be involved in the development of numerical cognition Discussions of the above and related issues are important for the achievement of a comprehensive understanding of numerical cognition its brain basis development breakdown in brain injured individuals and failures to master mathematical skills Serves as an innovative reference on the emerging field of numerical cognition and the branches that converge on this diverse topic Features chapters from leading researchers in the field Includes an overview of the multiple disciplines that comprise numerical cognition and discusses the measures that can be used in analysis Introduces novel ideas that connect non countable continuous variables to numerical cognition

Visualisation and Epistemological Access to Mathematics Education in Southern Africa Marc Schäfer,2023-04-27 This book demonstrates that using visualisation processes in mathematics education can help to enhance teaching and learning and bridge the inequality gap that exists between well resourced and under resourced schools in Southern Africa Drawing on classroom research conducted in the Southern African region it examines how epistemological access in a context of gross inequality can be constructively addressed by providing research based solutions and recommendations The book outlines the visualisation process as an integral but often overlooked process of mathematics teaching and learning It goes beyond the traditional understanding of visualisation processes such as picture forming and using tools and considers visualisation processes that are semiotic in nature and includes actions such as gestures in combination with language It adds value to the visualisation in mathematics education research discourse and deliberation in Africa With a unique focus on Southern Africa and open avenues for further research and collaboration in the region it will be a highly relevant reading for researchers
