Number Activities For Children With Mathematical Learning Difficulties:

Number Mel Lever,2013-10-23 First Published in 2003 This short series of three books Number Shape and Space and Measures and Handling Data gives teachers and parents a range of ideas to help children with mathematical learning difficulties get to grips with mathematics In order to help these children effectively statements and teaching points need to be rephrased and produced in a variety of ways using concrete and pictorial aids The activities in these books will help teachers to offer children a wide ranging mathematical vocabulary adding meaning to the words children already use rather than just adding words to their repertoire these activities are flexible and can be used in any order with children of a range of ages and ability Activities focusing on number includes early counting activities acquisition and use of number bonds using the 100 square in understanding the four rules of number and number patterns strategies to help with place value an introduction to Maths Monster and activities to help memory training

Measures and Handling Data Mel Lever,2013-01-11 First Published in 2003 This book offers practical advice to those students of maths who don't understand it and don't like it The author asks So what shall we do about it This is what makes her books so helpful they give parents and teachers practical ideas they can use First addressing the question of the types of difficulty encountered she then moves on to overcoming the difficulty

Shape and Space Mel Lever,2013-01-11 Activities focusing on shape and space include symmetry shapes and patterns properties of shapes points of the compass angle and turn measurement of angles and use of compass and protractor and coordinates

Mathematics for Children with Severe and Profound Learning Difficulties Les Staves,2013-12-19 The book will covers a wide range of approaches to teaching and learning and demonstrates how mathematics can be related to personal and social development communication and thinking skills Written with the non specialist in mind and including plenty of practical examples it will make useful reading for teachers in mainstream and special schools and learning support assistants Early years practitioners and teachers in training may find the book useful for its descriptions of how children acquire their foundation of early mathematics and numeracy skills

Effective Teaching Strategies for Dyscalculia and Learning Difficulties in Mathematics Marie-Pascale Noël,Giannis Karagiannakis,2022-03-28 Effective Teaching Strategies for Dyscalculia and Learning Difficulties in Mathematics provides an essential bridge between scientific research and practical interventions with children It unpacks what we know about the possible cognitive causation of mathematical difficulties in order to improve teaching and therefore learning Each chapter considers a specific domain of children's numerical development counting and the understanding of numbers understanding of the base 10 system arithmetic word problem solving and understanding rational numbers The accessible guidance includes a literature review on each topic surveying how each process develops in children the difficulties encountered at that level by some pupils and the intervention studies that have been published It guides the reader step by step through practical guidelines of how to assess these processes and how to build an intervention to help

children master them Illustrated throughout with examples of materials used in the effective interventions described this essential guide offers deep understanding and effective strategies for developmental and educational psychologists special educational needs and or disabilities coordinators and teachers working with children experiencing mathematical difficulties

International Handbook of Mathematical Learning Difficulties Annemarie Fritz,Vitor Geraldi Haase,Pekka Räsänen,2019-01-30 This comprehensive volume provides teachers researchers and education professionals with cutting edge knowledge developed in the last decades by the educational behavioural and neurosciences integrating cognitive developmental and socioeconomic approaches to deal with the problems children face in learning mathematics The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades but the most part of this research has been conducted in non applied settings and there s still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings Now it s time to bring the results from the laboratory to the classroom Apart from bringing the theoretical discussions to educational settings the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues And it does so from an international perspective dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society

Abstract Mathematical Cognition Wolfgang Grodd, Philippe Chassy, 2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated

view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts
