KWIC Index for Numerical Algebra Alston Scott Householder, 1972 **Numerical Linear Algebra and Optimization** Philip E. Gill, Walter Murray, Margaret H. Wright, 2021-05-13 This classic volume covers the fundamentals of two closely related topics linear systems linear equations and least squares and linear programming optimizing a linear function subject to linear constraints For each problem class stable and efficient numerical algorithms intended for a finite precision environment are derived and analyzed While linear algebra and optimization have made huge advances since this book first appeared in 1991 the fundamental principles have not changed These topics were rarely taught with a unified perspective and somewhat surprisingly this remains true 30 years later As a result some of the material in this book can be difficult to find elsewhere in particular techniques for updating the LU factorization descriptions of the simplex method applied to all inequality form and the analysis of what happens when using an approximate inverse to solve $Ax = b$ Numerical Linear Algebra and Optimization is primarily a reference for students who want to learn about numerical techniques for solving linear systems and or linear programming using the simplex method however Chapters 6 7 and 8 can be used as the text for an upper division course on linear least squares and linear programming Understanding is enhanced by numerous exercises

Scientific Computing John A. Trangenstein, 2018-05-14 This is the second of three volumes providing a comprehensive presentation of the fundamentals of scientific computing This volume discusses more advanced topics than volume one and is largely not a prerequisite for volume three This book and its companions show how to determine the

quality of computational results and how to measure the relative efficiency of competing methods Readers learn how to determine the maximum attainable accuracy of algorithms and how to select the best method for computing problems This book also discusses programming in several languages including C Fortran and MATLAB There are 49 examples 110 exercises 66 algorithms 24 interactive JavaScript programs 77 references to software programs and 1 case study Topics are introduced with goals literature references and links to public software There are descriptions of the current algorithms in LAPACK GSLIB and MATLAB This book could be used for a second course in numerical methods for either upper level undergraduates or first year graduate students Parts of the text could be used for specialized courses such as nonlinear optimization or iterative linear algebra
