Over a short few decades the field of pediatric endoscopy has matured from the exploratory to the routine Performance of endoscopic procedures in children is now a fundamental aspect of the practice of more than 2000 pediatric gastroenterologists in North America and endoscopic instruments are increasingly being developed with an eye to their pediatric applications Ensuring safe and effective endoscopy in children requires specific medical knowledge and technical competency in addition to appropriately designed equipment and settings Obtaining consent from parents as well as assent from patients for the purposes of performing diagnostic and therapeutic gastrointestinal procedures begins with a deep understanding of risks and benefits that endoscopy affords and is typically gained through formal training in the field Diagnostic endoscopy may help to confirm common pediatric conditions including eosinophilic esophagitis and inflammatory bowel disease while therapeutic procedures to treat strictures in the GI tract may help children avoid more invasive surgeries Using endoscopy in children to achieve hemostasis or to remove commonly swallowed foreign bodies such as lithium batteries or high powered magnets can be lifesaving and the insertion of feeding tubes can help medically complex patients to thrive In short pediatric endoscopy is an integral component of healthcare for children and gaining and understanding of its best practices may help all clinicians to better recognize its role in pediatric disease outcomes *Smart Information Systems* Frank Hopfgartner,2015-01-14 This text presents an overview of smart information systems for both the private and public sector highlighting the research questions that can be studied by applying computational intelligence The book demonstrates how to transform raw data into effective smart information services covering the challenges and potential of this approach Each chapter describes the algorithms tools measures and evaluations used to answer important questions This is then further illustrated by a diverse selection of case studies reflecting genuine problems faced by SMEs multinational manufacturers service companies and the public sector Features provides a state of the art introduction to the field integrating contributions from both academia and industry reviews novel information aggregation services discusses personalization and recommendation systems examines sensor based knowledge acquisition services describing how the analysis of sensor data can be used to provide a clear picture of our world *Artificial Intelligence in Healthcare* Xianghua Xie,Iain Styles,Gibin Powathil,Marco Ceccarelli,2024-08-13 The two volume set LNCS 14975 14976 constitutes the
