Proceedings of The 3rd International Conference on Climate Change and Ocean Renewable Energy Joan Cecilia Casila, Anupam Khajuria, Saim Memon, 2025-08-19 This book promotes policy frameworks and economic models facilitating large scale ocean renewable energy deployment Renewable energy refers to power generated from naturally replenished resources like sunlight wind rain tides waves and geothermal heat These sources are abundant and sustainable on a human timescale making them crucial in addressing global energy needs According to BP s 2018 Energy Outlook renewable energy is set to grow fivefold by 2040 contributing about 14% of global primary energy This growth is pivotal as climate change driven by rising global temperatures poses severe risks to humans and ecosystems The transition to renewable energy including biofuels offers a critical solution to mitigate these impacts By reducing reliance on fossil fuels we can help slow the progression of climate change In the past renewables were seen as costly but advancements in clean energy technology are

making them more affordable This cost reduction is accelerating the global shift toward renewable energy promoting sustainable economic growth and reducing environmental harm caused by fossil fuel dependency The future of energy lies in harnessing these renewable resources **Applied Agricultural Practices for Mitigating Climate Change [Volume 2]**

Biswas, Cecilia Tortajada, 2015-11-17 This book pursues a comprehensive approach so as to arrive at a better understanding of the implications of climate change on sustainable development focusing on the perspective of water Climate change is one of today s most pressing global issues and will become increasingly important in the decades to come as societies will feel its pervasive impacts in many aspects of their lives Given that the majority of these climate change impacts will be felt through the medium of water the book explores the interrelationships and inter linkages between water climate change and sustainable development Environmental Policy Processes Surrounding South Africa's Plastic Bags Regulations: Tensions, Debates and Responses in Waste Product Regulation Godwell Nhamo, 2008-01-31 This study was conducted in South Africa South Africa is the first country within the Southern African Development Community to have regulated plastic shopping bags waste through the imposition of both a standard on thickness and a levy Given this scenario the Plastic Bags Regulations present an illustrative case for researching complexity uncertainty and controversies surrounding a new trend in environmental policy making namely waste product regulation The thesis focuses on understanding and investigating tensions debates and responses emerging from the policy process as actors and actor networks put not only the Plastic Bags Regulations into circulation as focal actant token but also other actants and actant networks as well To this end a research question that addressed environmental policies tensions debates and responses that informed the development of South Africa s Plastic Bags Regulations was spelt out The research objectives included the need to 1 analyse selected international environmental policy processes surrounding plastic shopping bags litter and waste regulation and how these influenced developments in South Africa 2 identify actors actants and actor actant networks that shaped and were being transformed by South Africa s Plastic Bags Regulations and explain the tensions debates and responses arising in the policy processes 3 identify environmental policy outputs and assess outcomes emerging from the formulation and implementation of South Africa s Plastic Bags Regulations and 4 establish patterns in environmental policy process reforms around South Africa s Plastic Bags Regulations The language of actors human actants non human and actor actant networks brings to the fore the aspects of processes and relationships that exist around them As such insights from the actor actant network theory AANT were drawn upon to inform the research AANT enquiry framework collapses binaries such as nature society art science structure agency and global local historically associated with a particular type of social theory AANT also denies that purely technical scientific or social relations are possible the notion of quasi objects or token Data sets were generated following the Plastic Bags Regulations as token actant with time frames

ranging from prior to during and after the formulation of the regulations Similarly data analysis drew insights from AANT's four moments of translation namely problematisation interessement enrolment and mobilisation with the intervention theory providing an evaluative perspective that complemented AANT The findings were that after the promulgation of the first draft of the Plastic Bags Regulations in May 2000 tensions emerged around the nature of regulation whether command and control preferred by government or self regulation preferred by industry and labour In this regard the latter group raised concerns about jobs income and equipment loss as well as the need to have a holistic approach to waste management rather than targeting a single product at a time whilst the former maintained that this would not be so As such education awareness and stringent antilitter penalties were proposed by industry and labour as sustainable responses to the problem of plastic shopping bags waste rather than regulation These debates continued and resulted in minor amendments to the original regulations as finalised by Government in May 2002 However industry and labour continued lobbying government resulting in the conclusion of the Plastic Bags Agreement in September 2002 and the ultimate repulsion of the May 2002 regulations in May 2003 As revealed by this research these responses led to broader social responses and further tensions as demand for plastic shopping bags went down by about 80% although an estimated 1000 jobs were lost and a number of companies lost equipment and business with some closing down following the implementation of

Engineering Response to Global Climate Change Robert G. Watts, 1997-07-30 This book goes beyond the analysis offered by typical works on this subject to propose real solutions to problems caused by changes in the earth's climate From new ways to cut energy consumption and reduce carbon dioxide emissions to discussions of the possibilities of sea walls and climate altering technologies *Engineering Response to Global Climate Change* presents new conceptual tools and suggests research necessary for correcting and alleviating problems caused by global warming Engineers are just now being asked to consider the problems of climate change and the possible technological responses This complete reference covers the whole range of potential impacts of climate change and their engineering solutions Of special interest is the chapter on geoengineering which suggests how engineers may someday be able to intervene in planetary processes to reduce the effects of global warming Edited by a regional director of the National Institute for Global Environmental Change and offering the collective expertise of a team of expert authors each renowned in his or her field this book offers thorough coverage of this important topic from an engineering and technology perspective

Climate Change Adaptation in the Built Environment Chamindi Malalgoda, Dilanthi Amaratunga, Richard Haigh, Shavindree Nissanka, Nishara Fernando, Ruben Paul Borg, Mo Hamza, 2025-05-02 Global climate change is one of the greatest environmental threats facing humanity and it is affecting every country on every continent Recent evidence confirms a close liaison between climate change induced hazards and the built environment as the built environment demonstrates a high fragility and vulnerability to hazardous situations The impact of climate change is particularly pertinent to the built environment given the life expectancy of buildings and the fact that it

is essential to adapt the existing built environment to deal with a climate that may be significantly different from that in which it evolved Coastal regions are highly vulnerable to climate change because in addition to changes in temperature precipitation and more frequent flooding they will be affected by rising sea levels wave heights and accelerated coastal erosion The built environment exerts considerable influence over coastal communities local climate and environment Coastal areas also tend to be highly populated with many vulnerable urban centres located near the coastal belt In addressing such challenges it is important to better understand the impacts of climate change on the built environment and to develop tangible climate adaptation measures for the built environment
