Understanding Pain Fernando Cervero, 2014-02-14 An expert explores the nature of pain why it hurts and why some pain is good and some pain is bad If you touch something hot it hurts You snatch your hand away from the hot thing immediately Obviously But what is really happening biologically and emotionally In Understanding Pain Fernando Cervero explores the mechanisms and the meaning of pain You touch something hot and your brain triggers a reflex action that causes you to withdraw your hand protecting you from injury That kind of pain Cervero explains is actually good for us it acts as an alarm that warns us of danger and keeps us away from harm But Cervero tells us not all pain is good for you There is another kind of pain that is more like a curse chronic pain that is not related to injury This is the kind of pain that fills pain clinics and makes life miserable Cervero describes current research into the mysteries of chronic pain and efforts to develop more effective treatments Cervero reminds us that pain is the most common reason for people to seek medical attention but that it remains a biological enigma It is protective but not always Its effects are not only sensory but also emotional There is no way to measure it objectively no test that comes back positive for pain the only way a medical professional can gauge pain is by listening to the patient s description of it The idea of pain as a test of character or a punishment to be borne is changing prevention and treatment of pain are increasingly important to researchers clinicians and patients Cervero s account brings us closer to understanding the meaning of pain
