biennial oscillation and the South Asian summer monsoon In addition typhoons in the western North Pacific are most active during the East Asian summer monsoon They may be considered as a component of the East Asian summer monsoon as they contribute substantial amounts of rainfall and have major impacts on the region Because of its impacts on nearly one third of the world s population and on the global climate system including effects on the climate change the study of the East Asian monsoon has received increased attention both in East Asian countries and in the United States This book presents reviews of recent research on the subject **Dollar a Day Revisited** ,
