Davis Jr.,Robert W. Dalrymple,2011-10-20 This book presents a comprehensive contemporary review of tidal environments and deposits Individual chapters each written by world class experts cover the full spectrum of coastal shallow marine and even deep marine settings where tidal action influences or controls sediment movement and deposition Both siliciclastic and carbonate deposits are covered Various chapters examine the dynamics of sediment transport by tides and the morphodynamics of tidal systems Several chapters explore the occurrence of tidal deposits in the stratigraphic context of entire sedimentary basins This book is essential reading for both coastal geologists and managers and geologists interested in extracting hydrocarbons from complex tidal successions **Quaternary Sedimentation in South Florida** Paul

Shimmield,2020-02-03 Marine systems vary in their sensitivities to perturbation Perturbation may be insidious such as increasing eutrophication of coastal areas or it may be dramatic such as a response to an oil spill or some other accident Climate change may occur incrementally or it may be abrupt and ecosystem resilience is likely to be a complex function of the interactions of the factors and species mediating key biogeochemical processes Biogeochemistry of Marine Systems considers issues of marine system resilience focusing on a range of marine systems that exemplify major global province types Each system is interesting in its own right on account of its sensitivity to natural or anthropogenic change or its importance as an ecological service provider Each contributing author concentrates on advances of the last decade This prime reference source for marine biogeochemists marine ecologists and global systems scientists provides a strong foundation for the study of the multiple marine systems undergoing change because of natural biochemical or anthropogenic factors Depositional Controls on the Late Campanian Sego Sandstone and Implications for Associated Coal-forming Environments in the Uinta and Piceance Basins Karen J. Cohen,2003-05-29 This text written by a leading researcher in the field describes the origin and formation of lakes in order to give context to the question of how lacustrine deposits form It explains the process of sedimentation in lakes and the chemistry of those deposits and describes how the age of lake deposits are determined Additionally this book shows how different groups of fossils are used in interpreting the paleontological record of lakes In order to illustrate the more synthetic approaches to interpreting the history of lakes the author also discusses such special topics as lake level history lake evolution and the impact of environmental change on lakes *Proterozoic Geology* L.
