A History of the Pacific Salmon Crisis

Jim Lichatowich

Salmon Without Rivers

Zoltán Grossman

Salmon Without Rivers:

Salmon Without Rivers Jim Lichatowich, 1999-08 Throughout Lichatowich argues that the dominant worldview of our society a worldview that denies connections between humans and the natural world has created the conflict and controversy that characterize the recent history of salmon The author argues that unless this worldview is challenged and changed there is little hope for recovery BOOK JACKET To Think Like a Mountain Niels Sparre Nokkentved, 2021-06-22 In the West shortsighted human self interest has resulted in devastating environmental losses The fur trade decimated beaver populations and streams and wetland ecosystems deteriorated Though most mining ceased by the late 1920s water running from the Pacific Mine nearly a century later still carried ten times the lead level standard set by the federal Clean Water Act Where grazing depleted native bunchgrasses fire prone cheatgrass grew in its place Migrating from Idaho streams salmon once reached the ocean in ten to fourteen days Now it takes fifty or more In 2016 a snowstorm blew a flock of snow geese off course They landed on contaminated water and about three thousand died Author Niels S Nokkentved takes a fresh look at environmental challenges affecting Northwest residents His essays examine cultural conflicts over resource extraction threats to watersheds from abandoned mines wolf recovery in the northern Rocky Mountains the lingering effects of livestock grazing on western rangelands and the rapidly disappearing sage grouse They discuss the importance of forest fires the value of beavers the failed promises of salmon hatcheries the reasons behind the decline of the timber industry in the Pacific Northwest and how unlikely allies learned to set aside their differences in order to resolve long standing disputes Nokkentved s goal is to encourage people to think like a mountain in other words to consider the long term consequences He shares his connection to each concern as well as his own evidence based perspective He believes that it most profits society collectively and as individuals when people respect the balance of nature and he wants to draw others to the same conclusion

H. Bruce Franklin, 2007-04-01 In this brilliant portrait of the oceans unlikely hero H Bruce Franklin shows how menhaden have shaped America s national and natural history and why reckless overfishing now threatens their place in both Since Native Americans began using menhaden as fertilizer this amazing fish has greased the wheels of U S agriculture and industry By the mid 1870s menhaden had replaced whales as a principal source of industrial lubricant with hundreds of ships and dozens of factories along the eastern seaboard working feverishly to produce fish oil Since the Civil War menhaden have provided the largest catch of any American fishery Today one company Omega Protein has a monopoly on the menhaden reduction industry Every year it sweeps billions of fish from the sea grinds them up and turns them into animal feed fertilizer and oil used in everything from linoleum to health food supplements The massive harvest wouldn t be such a problem if menhaden were only good for making lipstick and soap But they are crucial to the diet of bigger fish and they filter the waters of the Atlantic and Gulf coasts playing an essential dual role in marine ecology perhaps unmatched anywhere on the planet As their numbers have plummeted fish and birds dependent on them have been decimated and toxic algae have begun

to choke our bays and seas In Franklin s vibrant prose the decline of a once ubiquitous fish becomes an adventure story an exploration of the U S political economy a groundbreaking history of America s emerging ecological consciousness and an inspiring vision of a growing alliance between environmentalists and recreational anglers **Humans Versus Nature**

Daniel R. Headrick,2020 Since the appearance of Homo sapiens on the planet hundreds of thousands of years ago human beings have sought to exploit their environments extracting as many resources as their technological ingenuity has allowed As technologies have advanced in recent centuries that impulse has remained largely unchecked exponentially accelerating the human impact on the environment Humans versus Nature tells a history of the global environment from the Stone Age to the present emphasizing the adversarial relationship between the human and natural worlds Nature is cast as an active protagonist rather than a mere backdrop or victim of human malfeasance Daniel R Headrick shows how environmental changes epidemics climate shocks and volcanic eruptions have molded human societies and cultures sometimes overwhelming them At the same time he traces the history of anthropogenic changes in the environment species extinctions global warming deforestation and resource depletion back to the age of hunters and gatherers and the first farmers and herders He shows how human interventions such as irrigation systems over fishing and the Industrial Revolution have in turn harmed the very societies that initiated them Throughout Headrick examines how human driven environmental changes are interwoven with larger global systems dramatically reshaping the complex relationship between people and the natural world In doing so he roots the current environmental crisis in the deep past **The Tragedy of the Commodity** Stefano B.

Longo,Rebecca Clausen,Brett Clark,2015-06-25 Winner of the 2017 Paul Sweezy Marxist Sociology Book Award from the American Sociological Association Although humans have long depended on oceans and aquatic ecosystems for sustenance and trade only recently has human influence on these resources dramatically increased transforming and undermining oceanic environments throughout the world Marine ecosystems are in a crisis that is global in scope rapid in pace and colossal in scale In The Tragedy of the Commodity sociologists Stefano B Longo Rebecca Clausen and Brett Clark explore the role human influence plays in this crisis highlighting the social and economic forces that are at the heart of this looming ecological problem In a critique of the classic theory the tragedy of the commons by ecologist Garrett Hardin the authors move beyond simplistic explanations such as unrestrained self interest or population growth to argue that it is the commodification of aquatic resources that leads to the depletion of fisheries and the development of environmentally suspect means of aquaculture To illustrate this argument the book features two fascinating case studies the thousand year history of the bluefin tuna fishery in the Mediterranean and the massive Pacific salmon fishery Longo Clausen and Clark describe how new fishing technologies transformations in ships and storage capacities and the expansion of seafood markets combined to alter radically and permanently these crucial ecosystems In doing so the authors underscore how the particular organization of social production contributes to ecological degradation and an increase in the pressures placed upon the ocean The

authors highlight the historical political economic and cultural forces that shape how we interact with the larger biophysical world A path breaking analysis of overfishing The Tragedy of the Commodity yields insight into issues such as deforestation biodiversity loss pollution and climate change **Adaptive Governance** Ronald Brunner,Toddi A. Steelman,Lindy Coe-Juell,Christina M. Cromley,Christine M. Edwards,Donna W. Tucker,2005-08-10 Drawing on five detailed case studies from the American West the authors explore and clarify how to expedite a transition toward adaptive governance and break the gridlock in natural resource policymaking Unlike scientific management which relies on science as the foundation for policies made through a central bureaucratic authority adaptive governance integrates various types of knowledge and organizations Adaptive governance relies on open decision making processes recognizing multiple interests community based initiatives and an integrative science in addition to traditional science Case studies discussed include a program to protect endangered fish in the Colorado River with the active participation of water developers and environmentalists a district ranger s innovative plan to manage national forestland in northern New Mexico and how community based forestry groups are affecting legislative change in Washington D C Effective Conservation Science Peter M. Kareiva,Michelle Marvier,Brian R. Silliman,2018 This novel text assembles some of the most intriguing voices in modern conservation biology Collectively they highlight many of the most challenging questions being asked in conservation science today each of which will benefit from new experiments new data and new analyses The book s principal aim is to inspire readers to tackle these uncomfortable issues head on A second goal is to be reflective and consider how the field has reacted to challenges to orthodoxy and to what extent have or can these challenges advance conservation science Furthermore several chapters discuss how to guard against confirmation bias The overall goal is that this book will lead to greater conservation of ecosystems and biodiversity by harnessing the engine of constructive scientific scepticism in service of better results

Unlikely Alliances Zoltán Grossman,2017-06-20 Often when Native nations assert their treaty rights and sovereignty they are confronted with a backlash from their neighbors who are fearful of losing control of the natural resources Yet when both groups are faced with an outside threat to their common environment such as mines dams or an oil pipeline these communities have unexpectedly joined together to protect the resources Some regions of the United States with the most intense conflicts were transformed into areas with the deepest cooperation between tribes and local farmers ranchers and fishers to defend sacred land and water Unlikely Alliances explores this evolution from conflict to cooperation through place based case studies in the Pacific Northwest Great Basin Northern Plains and Great Lakes regions during the 1970s through the 2010s These case studies suggest that a deep love of place can begin to overcome even the bitterest divides The Routledge Companion to Gender and the American West Susan Bernardin,2022-06-19 This is the first major collection to remap the American West though the intersectional lens of gender and sexuality especially in relation to race and Indigeneity Organized through several interrelated key concepts The Routledge Companion to Gender and the American West addresses

gender and sexuality from and across diverse and divergent methodologies. Comprising 34 chapters by a team of international contributors, the Companion is divided into four parts: Genealogies, Bodies, Movements, Lands. The volume features leading and newer scholars whose essays connect interdisciplinary fields including Indigenous Studies, Latinx and Asian American Studies, Western American Studies, and Queer Feminist and Gender Studies. Through innovative methodologies and reclaimed archives of knowledge, contributors model fresh frameworks for thinking about relations of power and place, gender and genre, settler colonization and decolonial resistance. Even as they reckon with the ongoing gendered and racialized violence at the core of the American West, contributors forge new lexicons for imagining alternative Western futures. This pathbreaking collection will be invaluable to scholars and students studying the origins, myths, histories, and legacies of the American West. This is a foundational collection that will become invaluable to scholars and students across a range of disciplines including Gender and Sexuality Studies, Literary Studies, Indigenous Studies, and Latinx Studies.

Stock Enhancement and Sea Ranching Kenneth M. Leber, Shuichi Kitada, H. L. Blankenship, Terje Svasand, 2008-04-15
The collapse of many of the world's fisheries continues to be of major concern, and the enhancement of fish stocks through techniques such as ranching is of huge importance and interest across the globe. This important book, which contains fully peer-reviewed and carefully edited papers from the 2nd International Symposium in Stock Enhancement and Sea Ranching, is broadly divided into sections covering the following areas: The present situation of stock enhancement; Seed quality and techniques for effective stocking; Health management of hatchery stocks; Methods for evaluating stocking effectiveness; Population management in stock enhancement and sea ranching; Management of stocked populations; Ecological interactions with wild stocks; Genetic management of hatchery and wild stocks; Socio-economics of stock enhancement; Case studies. Stock Enhancement and Sea Ranching has been written and edited by some of the world's foremost authorities in fisheries science and related areas, and is essential reading for all fisheries scientists throughout the world. Fish biologists, marine and aquatic scientists, environmental biologists, ecologists, conservationists, aquaculture personnel, and oceanographers will all find much of use and interest within this book. All libraries within universities and research establishments where these subjects are studied and taught should have copies of this book on their shelves.
