Engineering Geology, 2nd Edition Reddy D.V., Engineering Geology is a multidisciplinary subject that interacts with other disciplines such as mineralogy, petrology, structural geology, hydrogeology, seismic engineering, rock engineering, soil mechanics, geophysics, remote sensing, RS, GIS, GPS and environmental geology. This book is the only one of its kind in the Indian market that caters to the students of all these subjects. Engineers require a deep understanding, interpretation and analyses of earth sciences before suggesting engineering designs and remedial measures to combat natural disasters such as earthquakes, volcanoes, landslides, debris flows, tsunamis and floods. This book covers all aspects of engineering geology and is intended to serve as a reference for practicing civil engineers, geotechnical engineers, marine engineers, geologists and mining engineers. Engineering Geology has also been designed as a textbook for students pursuing undergraduate and postgraduate courses in advanced applied geology and earth sciences. A plethora of examples and case studies relevant to the Indian context have been included for better understanding of the geological challenges faced by engineers. New in this Edition: The concept of watershed and the depiction of watershed atlas of India. Latest findings by the Indian Bureau of Mines. Recent developments in coastal engineering and innovative structures. New types of protective structures to guard against tsunamis. Role of geology in building smart cities. Environmental legislation in India.

Tunnels and Underground Structures: Proceedings Tunnels & Underground Structures, Singapore 2000 J. Zhao, J.N. Shirlaw, Krishnan R., 2017-10-02 This text describes topics discussed at the conference including tunnelling and construction in soft ground and rocks, geological investigations, tunnelling machines, planning for underground infrastructure, safety issues and environmental and social aspects of underground development.

Immersed Tunnels Richard Lunniss, Jonathan Baber, 2013-03-04 Immersed tunnels have been around for more than a century but remain a relatively unknown form of tunnel construction. For waterway crossings they are an effective alternative to bored tunnels and bridges, particularly in shallower waters, soft alluvial soils and earthquake-prone areas. Successful implementation requires a thorough understanding of

Tunnels and Underground Cities. Engineering and Innovation Meet Archaeology, Architecture and Art Daniele Peila, Giulia Viggiani, Tarcisio Celestino, 2019-04-17 Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art contains the contributions presented at the World Tunnel Congress 2019, Naples, Italy, 3-9 May 2019. The use of underground space is continuing to grow due to global urbanization, public demand for efficient transportation and energy-saving production and distribution. The growing need for space at ground level along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. This

vision was the source of inspiration for the design of the logos of both the International ITA and Italian SIG Tunnelling Association. By placing key infrastructures underground, the black circle in the logos, it will be possible to preserve and enhance the quality of the space at ground level, the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects, and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics, and quality of life and adaptability to future and varied functions. The 700 contributions cover a wide range of topics from more traditional subjects connected to technical challenges of design and construction of underground works with emphasis on innovation in tunneling engineering to less conventional and archetypically Italian themes such as archaeology, architecture, and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction, Environment sustainability in underground construction, Geological and geotechnical knowledge and requirements for project implementation, Ground improvement in underground constructions, Innovation in underground engineering materials and equipment, Long and deep tunnels, Public communication and awareness, Risk management, contracts and financial aspects, Safety in underground construction, Strategic use of underground space for resilient cities, Urban tunnels, Tunnels and Underground Cities. Engineering and Innovation meet Archaeology, Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects, and others involved in underground planning, design, and building around the world, and for academics who are interested in underground constructions and geotechnics. **Tunnel Construction** Dr. Ashok Kumar Sharma, 2021-02-11

The book describes the details about the tunnel construction that includes history, shape, and sizes, various conventional methods, techniques, planning, designing, and methodology of construction in Indian context. The geological investigation for the selection of most economical and technically viable alignment for transportation. Further, the book highlights the necessity of safety for men, material, and machinery during construction. The Geo technical investigation reports are prepared. Rock is classified in five classes like good rock, poor, fair, poor, and very poor according to the strength and characteristics of the rock. The conclusion and recommendation are followed while designing the tunnel with adequately safe and sound tunnel support system. The book emphasises on engaging skilled, experienced, and trained workmen, plant, and equipment in good service condition, which is very important for the completion within stipulated time and cost. The principle of reduce, reuse, and recycle is applied in all possible construction activities to minimise the risk to the environment. For ensuring this, the temporary and permanent support system are designed to provide adequate support for the excavated tunnel profile. The Geo technical instrumentation is also provided to continuously monitor the profile, foresee the behaviour of Rock mass, so that preventive steps are taken in time to mitigate the threats posed by fractured rock mass or poor rock. Finally, it illustrates the various detailed activities and sequences involved at macro level and micro level for the construction of a tunnel.

Practical Management of Tunneling with Tunnel Boring Machines Nuh Bilgin, Sinan Acun, 2024-02-12 This book

covers the management of mechanized tunneling with examples from global projects It starts with an introduction to mechanized tunneling including management of job organization planning job sites portals or launching boxes in mountains open fields and urban areas The management of the transport with belt conveyors locomotives and multi service vehicles is explained with numerical examples Cost management and basic parameters governing tunneling costs in different countries are discussed Risk management in mechanized tunneling projects is also explained Features Offers the practical issues with setting up a job site the cost and logistic issues related to tunneling Reviews cost management and basic parameters governing tunneling costs in different countries Covers treatment of spoil management plan and the management of contaminated ground Explores key points on the logistics and the management of the consumables Provides the latest international case studies of specific companies This book is aimed at professionals and researchers in tunneling civil and mining engineering and geology

contributions presented at the ITA AITES World Tunnel Congress 2024 which was held from 19-25 April 2024 in Shenzhen China. As urbanization accelerates, the pivotal role of tunnels and underground spaces in fostering environmental sustainability and improving quality of life becomes ever more pronounced. These underground structures serve as sustainable solutions to the challenges posed by rapid urban growth. By seamlessly integrating into urban landscapes, they alleviate congestion, reduce pollution, and enhance overall mobility, thus contributing to a greener and more sustainable urban environment. Moreover, tunnels and underground works provide vital support for various urban functions, such as accommodating economic activities, providing safe shelters during emergencies or disasters, and facilitating efficient utility management. They address immediate urban needs and lay the foundation for a better and more resilient future. By focusing on the latest trends in tunnelling and underground engineering and looking ahead to the era of low carbon and intelligent technology, the papers in this book illustrate the transformative potential of tunnels and underground works in shaping a better life for present and future generations. The contributions cover a comprehensive range of topics on tunnel engineering, showcasing the latest advancements, insights, and innovations across the following areas: 1. Planning and General Aspects, 2. Design and Methodology, 3. Geotechnics, Geology, and Geophysical Prospecting, 4. Ground Stability and Consolidation, 5. Support and Lining, 6. Conventional Tunnelling, 7. Mechanized Tunneling (TBM shield), 8. Immersed Tunnels, 9. Waterproofing and Drainage, 10. Instrumentation and Monitoring, Testing and Inspection, 11. Digital and Information Technology, 12. Machine Learning, 13. Underground Caverns, Underground Space Use, 14. Operational Safety, Maintenance and Repair, 15. Contractual Practices and Risk Management. Tunnelling for a Better Life is a must-read for professionals, engineers, owners, and other stakeholders worldwide in tunnelling and underground engineering.
