The Neuroscience of Meditation Yi-Yuan Tang, Rongxiang Tang, 2020-02-21

The Neuroscience of Meditation: Understanding Individual Differences explores the individual differences in learning and practicing meditation while also providing insights on how to learn and practice effectively. The book comprehensively covers the research in brain areas and networks that mediate the positive effects of meditation upon physical and mental health. Though it examines how people differ in how they learn and practice meditation, it underscores how underlying mechanisms differ in learning and practicing meditation and how they remain unclear to researchers. This book addresses the research gap and explores the brain science behind meditation. Examines the biological mechanisms that give rise to individual differences. Incorporates brain imaging and physiological recordings for further measurement of individual differences. Covers the genetic association between meditation, learning, and practice. Explores how meditation changes over the lifespan from children to seniors.

Rethinking

Meditation David L. McMahan, 2023 Mindfulness practices derived from Buddhist sources have become ubiquitous. Meditation teachers will sometimes say that this is the same practice that the Buddha taught over 2500 years ago. David McMahan shows that the standard articulation of mindfulness is rather a distillation of particular strands of Buddhist thought that have combined with western ideas to create a unique practice tailored to modern life. *Rethinking Meditation* asks how and why these practices coalesced into the version we have today.

The Shamanic Path to Quantum Consciousness Laurent Huguelit, 2013-12-17

Uniting shamanism with quantum physics and psychology for conscious evolution, manifestation of desires, and the development of the soul. Details each of the 8 circuits of consciousness from the first circuit of physical survival to the eighth circuit of quantum consciousness. Reveals how to balance and upgrade your circuits through shamanic techniques and activate your creative power to shape reality. Explains how the 8 circuits are interconnected through feedback loops; if one is overactive, it can cause the others to shut down. First outlined by Timothy Leary and later expanded.

by Robert Anton Wilson and Antero Alli the eight circuit model of consciousness explains how the soul is multidimensional and functions on eight distinct interconnected planes that form the eight circuits of conscious awareness Each circuit is connected to certain behaviors and personality traits the second circuit for example is connected to emotional consciousness such as intuition feelings of courage or in its unbalanced state aggression and domination and the eighth circuit the creative circuit of quantum consciousness is related to limitless perception understanding and action that extends far beyond the limits of planet Earth Laurent Huguelit explains how these eight levels of awareness are interconnected through feedback loops forming a cybernetic mapping of the soul He explores the underactive overactive and balanced states of each circuit offering many psychological profiles as examples He reveals how activating a circuit that has been neglected can help bring another into balance Connecting this model of conscious evolution to shamanism the oldest consciousness science known to man the author explains how to balance and upgrade your own circuits through shamanic techniques He reveals how to reconnect with source energy by deprogramming trauma from your childhood that can affect your circuits With access to this unlimited energy you can activate your innate creative power to manifest your desires and shape reality Uniting shamanism and the law of attraction with advanced concepts of modern psychology quantum physics and the Akashic field theory of Ervin Laszlo Laurent Huguelit offers a practical map of human consciousness and the development of the soul as well as a vision for the cybernetic future of shamanism
