Copernican turn using the conditions of subjectivity to derive the metaphysical determinations of matter as the object of natural science with the new method called metaphysical construction which simultaneously grounds the mathematizability of physics The translators provide background and analysis of Plaass s work extend it to include the body of the MF and offer a variation on the analysis of the relationship between mathematics and metaphysics in the MF They discuss its relevance for contemporary paradigm dependency approaches to the philosophy of science and for philosophical hermeneutics The book will be of interest to Kant specialists as well as to students of the philosophy of science in general
