Report on the 1995 Scanning Review of European Bridge Structures, 1996. [Knots, Braids, and Mapping Class Groups -- Papers Dedicated to Joan S. Birman](#) Jane Gilman, 2001. There are a number of specialties in low dimensional topology that can find in their family tree a common ancestry in the theory of surface mappings. These include knot theory as studied through the use of braid representations and 3 manifolds as studied through the use of Heegaard splittings. The study of the surface mapping class group, the modular group, is of course a rich subject in its own right with relations to many different fields of mathematics and theoretical physics. However its most direct and remarkable manifestation is probably in the vast area of low dimensional topology. Although the scene of this area has been changed dramatically and experienced significant expansion since the original publication of Professor Joan Birman's seminal work *Braids, Links, and Mapping Class Groups* Princeton University Press, she brought together mathematicians whose research span many specialties all of common lineage. The topics covered are quite diverse. Yet they reflect well the aim and spirit of the conference to explore how these various specialties in low dimensional topology have diverged in the past 20-25 years as well as to explore common threads and potential future directions of development. This volume is dedicated to Joan Birman by her colleagues with deep admiration and appreciation of her contribution to low dimensional topology. [General Knowledge 2022](#) Team Prabhat, 2021-01-19.
