Bibliography of Agriculture, 1975-07 **Modelling Vector-borne and Other Parasitic Diseases** Hansen, J.W (ed.), Brain D. Perry, 1994-01-01 **Parasitic Protozoa**, 2012-12-02 Updated and much expanded the Second Edition of Parasitic Protozoa is designed to be useful to physicians veterinarians and research scientists concerned with diseases caused by protozoa in man and in domestic and wild animals including fish mollusks and insects as well as the more commonly considered vertebrate animals Each section contains information on disease pathogens treatment diagnosis and epidemiology of the diseases caused by the various protozoans The book is not limited to these medically oriented subjects but treats taxonomy morphology and metabolism of the organisms in such a way as to be of interest to scientists and graduate students working in the field of protozoology The entire edition published in ten volumes is arranged so that subjects of common interest occupy individual volumes *In Vitro Cultivation Of Protozoan Parasites* Patsy Jensen, 2019-08-08 It is the purpose of this book to make available to parasitologists and workers in many other disciplines a review of the developments leading up to the successful cultivation of the more important protozoan parasites of man and domestic animals Included is a detailed description of the current state of the art protozoan parasite cultivation and a limited discussion of the major achievements to our understanding of parasite biology derived through experimentation using cultured parasites Arthropod Venoms S. Bettini, 2013-03-13 Arthropod venoms have received much attention and have played an important role in folklore and medicine since ancient times Scorpion envenomation tarantism bee and wasp stings are among those subjects about which most has been speculated and written in the past In the last 50 years or so a great number of scientific papers have been devoted to arthropod venoms but only a few volumes have been designed to collect this rapidly increasing material and these are not recent Of late the chemistry and mode of action of several arthropod venoms have been thoroughly studied and some of these substances will probably be used as pharmacological tools and also as therapeutic agents The aim of the present volume is to collect in manual form new information as well as the old notions on arthropod venoms Even though it was our intention to present a volume on arthropod venoms and not on venomous arthropods inevitably we were forced to include information on venom producing organisms as well We assumed in fact that those scientists for whom the present manual is primarily intended biochemists particularly comparative biochemists and pharmacologists should be familiar with the biologic elements concerning the venom producing species which should show them how important it is to operate in close collaboration with biologists specialized in venomous arthropod systematics and biology Gregarines, Haemogregarines, Coccidia, Plasmodia, and Haemoproteids Julius Kreir, 1977-01-01 Gregarines Haemogregarines Coccidia Plasmodia and Haemoproteids **Agents Transmissible from Simians to Man** Manfred Brack, 2012-12-06 The contacts between man and nonhuman primates enable the transmission of microorganisms from one species to the other Such contact may occur at quite different levels man and nonhuman primates may share the same

ecosystem including the presence of vectors in the countries of origins of monkeys and apes the animals are captured to be sold or used for food field researchers have to stay near the animals in the wild an uncontrolled human population gets close enough to almost touch the animals in zoological gardens around the world pet owners establish bodily contact and finally researchers doing surgery or necropsies are exposed to an increased number of pathogens liberated from the organs and body fluids Usually monkeys and apes are more threatened with catching the microorganisms indigenous to man than vice versa but nevertheless outbreaks of true zoonoses with nonhuman primates as the source of infection have occurred Also the retransmission of originally human pathogens via nonhuman primates to man may pose a considerable risk to human health Unfortunately the information on the different agents transmissible between man and his relatives is too disseminated for practical use as it involves quite different scientific disciplines such as virology bacteriology parasitology primatology laboratory animal science etc It seemed therefore necessary to compile the current knowledge concerning this topic in a single publication Human infections of simian origin may be caused by several viruses bacteria fungi or endoparasites Ectoparasites in comparison are of little importance Advances in the Control of Theileriosis A.D. Irvin, M.P.

Cunningham, A.S. Young, 2012-12-06 Approximately five years have elapsed since the Conference on Tick borne Diseases and their Vectors Wilde 1978 University of Edinburgh was held at the Centre for Tropical Veterinary Medicine in Edinburgh Theileriosis was one of the main topics at that Conference and some 20 scientific presentations were given Also in the same year a Workshop on Theileriosis was held at the Kenyatta Conference Centre in Nairobi Henson Campbell 1977 IDRC Ottawa Both of these meetings provided a valuable updating of theilerial diseases and the Proceedings have been a constant source of reference for scientists in the ensuing years The meetings played a significant role in setting the scene for a number of important advances which have been made since then In February of this year attention was focused on these advances when nearly 200 scientists from over 30 countries were assembled at the International Laboratory for Research on Animal Diseases in Nairobi for the international conference on Advances in the Control of Theileriosis The interest and concern shown in this subject has now grown to the extent that more than 70 scientific presentations were given over the course of a very busy week An important facet of the Conference was the attention given to the control of Theileriosis since this must be the ultimate aim of all those involved with the disease Control will be difficult PATHOLOGY OF DOMESTIC ANIMALS 3E

K.V.F. Jubb, 1985-04-28 PATHOLOGY OF DOMESTIC ANIMALS 3E V2 **Advances in Parasitology**, 1989-07-01 This excellent series continues with a volume whose papers on protozoological parasites redress the helminth bias of some recent volumes Papers on both homoxenous and heteroxenous coccidia shed new light on these groups **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1976 *The Protozoan Phylum Apicomplexa* Norman D. Levine, 2018-01-18 About the turn of the century the Apicomplexa plus some other groups were called Sporozoa With the advent of the electron microscope it was realized that most Sporozoa have an apical complex those which do not the

Microspora Myxozoa and Ascetospora were removed and the name Apicomplexa was put forward by Dr Levine in 1970 Most of the important Apicomplexa fall into five main groups the gregarines haemogregarines about which there is relatively little known coccidia haemosporids and piroplasms These two volumes classify list with synonyms and hosts and give references to descriptions of the approximately 4600 species of Apicomplexa that have been named so far Volume I contains an 8 page introduction and covers the gregarines and coccidia including the haemogregarines In volume II are the Sarcocystidae the predator prey coccidia the haemosporids the malaria and related parasites the piroplasms and some parasites of uncertain affinities The Apicomplexa are divided into over 300 genera and more than 60 families but this division is deceiving Most of these groups contain only one or a few species There are fewer than 50 genera with 10 or more named species and only 8 with 100 or more These 8 genera Eimeria Haemogregarina Gregarina Isospora Haemoproteus Plasmodium Sarcocystis and Babesia comprise more than half of the species

Parasites and Western Man R.J. Donaldson,2012-12-06 The purpose of this book is to provide a concise account of those parasites which affect man in developed countries Other textbooks relate mainly to the tropics and subtropics where parasites by comparison are more common It is widely believed that this difference in prevalence between tropical and temperate countries is due to differences in climatic conditions alone Whilst it is true that certain vectors can only act as transmitters of disease under climatic conditions found in the tropics there are many other instances where climate per se is not a decisive factor More often parasitic disease is related to the poor standards of hygiene sanitation and nutrition which characterize many of these tropical and subtropical areas The advent of more international travel has added a new dimension to the study of parasites with the appearance of rare and exotic parasitic infections in the West This book encompasses the entire field of parasites in developed countries with a brief reference to other parts of the world whenever appropriate for the sake of completeness Each chapter provides basic information as well as recent advances and current thinking Thus the book will serve as an excellent comprehensive introduction to those taking up a specialized interest in the subject as well as those who may wish to obtain general information but are not actively working in the field Although it is primarily written from a medical and veterinary standpoint it provides valuable material for other disciplines

Vaccination Strategies of Tropical Diseases F. Y. Liew,1989-08-31 This work in the field of tropical medicine provides an in depth review in the development of vaccines against some of the most debilitating tropical diseases In this multi contributed three part book with clear and ample illustrations the reader will gather useful data and guidance to further his study in the field

Rodent Pest Management Ishwar Prakash,2018-05-04 The objective of this multi authored compendium is therefore to bring together the state of arts reported in one place Written by specialists by specialists in various fields of rodentology and to suggest future lines of research It is also felt that this work on rodent pest management will trigger more research effort for the benefit of mankind and help certain countries and organizations in revitalizing serious work in this field which it appears has dampened during the last few years
