Partial Decapitation of Chicken Embryos T. W. Betz, 1975 Partial Decapitation of Chicken Embryos, 1975

Developments of the Avian Embryo Freeman, 2012-12-06 In this book we have described the major events of embryonic development and considered the underlying mechanisms which result in the production of a viable hatchling. We have as the subtitle of the book indicates concentrated on behavioural and physiological topics; it is not our purpose to consider the early embryology of the bird which is adequately covered by other texts but we have included morphogenetic information where appropriate. The form of the book was dictated by a belief that interest in this aspect of development is not confined to embryologists, biochemists and physiologists. Therefore after describing the conditions in which the egg normally develops we have considered first the whole embryo, what it is like at different stages, what it does, how it gets from one position to another within the shell and how later it comes to interact with the wider environment of the nest. Only after this have we considered the development of the nervous and sensory mechanisms on which this transformation depends and on the problem of the level of behavioural maturity with which the chick emerges from the egg. With the main lines of development described we have in the second part of the book turned to a detailed consideration of the physiology of development ranging from what may be conveniently described as the life support systems: gaseous exchange, provision of energy etc. to the hormones in avian development. Scanes, Peter K.T. Pang, 2012-12-02 The Endocrinology of Growth, Development and Metabolism in Vertebrates provides an overview of vertebrate endocrinology. This book aims to strengthen the bridge between medical and comparative endocrinologists by addressing the benefits that they can derive from this association. Organized into five parts encompassing 24 chapters, this volume starts with a discussion on the structure and biological function of growth hormone (GH) and prolactin (PRL) family. This book then explains the extrinsic genetic and humoral factors that influence animal growth particularly in poikilotherms. This text also elaborates the environmental conditions that affect the growth of poikilotherms including food availability, temperature and photoperiod. Other chapters discuss how somatotropin affects the growth development in homeotherms such as livestock species. The reader is also introduced to the metabolic actions of GH which can be described in terms of short lived insulin like effects. Endocrinologists, molecular endocrinologists, biologists, molecular biologists, biochemists, researchers and physicians will find this book extremely useful. **Poultry Science**, 1991 Vol 5 includes a separately pagged special issue dated June 1926 Bibliography of Agriculture, 1976 Enkephalins and Endorphins R.E.
