Nier, Alfred L. Yergey, P. Jane Gale, 2015-07-02 Volume 9 Historical Perspectives Part B Notable People in Mass Spectrometry of The Encyclopedia of Mass Spectrometry briefly reviews the lives and works of many of the major people who carried out this development providing insights into the history of mass spectrometry applications through the personal stories of pioneers and innovators in the field The book presents biographies of notable contributors including Nobel Prize winners J J Thomson Francis W Aston Wolfgang Paul John B Fenn and Koichi Tanaka along with other luminaries in the field including Franz Hillenkamp Catherine Clarke Fenselau Alfred O C Nier and many more discussing not only the instruments and their uses but also providing interesting information on the careers characters and life stories of the people who did the work Highlights over 120 innovators in mass spectrometry including several Nobel Prize winners Discusses instrumentation and their uses also providing interesting information on the careers characters and life stories of the people who did the work Offers unique insight into the careers and personalities of luminaries in the field Coordinates with Volume 9 Historical Perspectives Part A The Development of Mass Spectrometry an overview of mass spectrometry development and progress Ideal reference for those interested in a wide variety of topics including analytical chemistry and chemical analysis amongst others      **Introduction to Mass Spectrometry** J. Throck Watson, O. David Sparkman, 2013-07-09 Completely revised and updated this text provides an easy to read guide to the concept of mass spectrometry and demonstrates its potential and limitations Written by internationally recognised experts and utilising real life examples of analyses and applications the book presents real cases of qualitative and quantitative applications of mass spectrometry Unlike other mass spectrometry texts this comprehensive reference provides systematic descriptions of the various types of mass analysers and ionisation along with corresponding strategies for interpretation of data The book concludes with a comprehensive 3000 references This multi disciplined text covers the fundamentals as well as recent advance in this topic providing need to know information for researchers in many disciplines including pharmaceutical environmental and biomedical analysis who are utilizing mass spectrometry      Mass Spectrometry in the Biological Sciences: A Tutorial M.L Gross, 2012-12-06 The developments in mass spectrometry over the past fifteen years have been impressive in their implications in bioanalytical chemistry The achievements begin with the inventions of Cf 252 Plasma Desorption Mass Spectrometry by Macfarlane and Fourier Transform Mass Spectrometry by Comisarow and Marshall in the mid 1970s The former showed the feasibility of producing large gas phase ions from large biomolecules whereas the latter enhanced the capabilities for ion trapping especially in analytical mass spectrometry A major achievement was the

development by Barber of Fast Atom Bombardment FAB mass spectrometry an advance that heralded a new era in biological mass spectrometry Contemporary and routine instruments such as magnetic sectors and quadrupoles were rapidly adapted to FAB and nearly the entire universe of small molecules became amenable to study by mass spectrometry The introduction of FAB also paved the way for improvement of instrument capability For example the upper mass limit of magnet sector mass spectrometers was increased by nearly an order of magnitude by the instrument manufacturers Furthermore the technique of tandem mass spectrometry MS/MS was given new meaning because important structural information for biomolecules could now be produced for ions introduced by FAB into the tandem instrument The evolution of MS/MS continues today with the development of ion traps time of flight and sector instruments equipped with array detection

Rowland Ivor Reed, 1968      **The Pedersen Memorial Issue** R.M. Izatt, J.S. Bradshaw, 2012-12-06 Foreword Charles J Pedersen 1904 1989 Nobel Laureate in Chemistry 1987 This issue is dedicated to the memory of the late Charles J Pedersen in recognition of his outstanding contribution to scientific research culminating in his discovery of crown ethers and their remarkable cation complexing properties and his receipt of the 1987 Nobel Prize in Chemistry Charlie's origin and early years in Korea did not portend the creative work in chemistry which would characterize his later life However we can see in his early years the influence of his Norwegian father and Japanese mother who considered his formal education to be of utmost importance At the age of eight he was sent abroad to Japan for schooling first at a convent school in Nagasaki and two years later at a French American preparatory school in Yokohama run by a Marianist order of Catholic priests and brothers The latter group encouraged him to attend the order's University of Dayton in Ohio where he received a bachelor's degree in chemical engineering Charlie's academic experiences his employment with du Pont and the creative spark which he manifested at an early stage of his scientific career are detailed in the paper in this issue by Herman Schroeder Schroeder had a long time association with Charlie at du Pont as a co worker supervisor and friend His recollections provide insight into Charlie's creative mind In addition they make it clear that a long period of creative work preceded the accidental discovery of the first synthetic crown ether It is important to note that Charlie's mind was well prepared to recognize the importance of his discovery The field of macrocyclic chemistry to a large degree had its beginnings with Charlie's discovery A first person account of his discovery is given as the first paper in this issue This account was prepared by him and was read at the 12th Symposium on Macrocyclic Chemistry in Hiroshima Japan in 1987 by Herman Schroeder The growth of this field since Charlie's first publication on the subject in 1967 has been enormous This growth is evidenced in one segment of the field by the three fold increase in the number of references in two Chemical Reviews articles on thermodynamic quantities associated with cation macrocycle interaction authored by us in 1985 and 1991 Charlie lived to see much of this growth He saw many of his own predictions of possible uses of crown ethers and related macrocycles realized Recognition for Charlie came late in his career He found it satisfying to see so many capable scientists go in so many directions as they applied his discovery to a wide range of chemical and other fields He made seminal contributions to the broad area known today as molecular recognition His work illustrates how one individual can make an enormous difference in science The effect of his life and work on those of us who contributed papers for this issue and on many others is appreciated and is acknowledged by several of the authors in their individual papers It is entirely appropriate to honor his memory with this special issue R M Izatt J S Bradshaw Department of Chemistry Brigham Young University Provo UT 84602 U S A Reprinted from Journal of Inclusion Phenomena and Molecular Recognition in Chemistry Volume 12 Nos 1 4 1992      Publications of the National Bureau of
