Mass Spectrometry in Biotechnological Process Analysis and Control Elmar Heinzle,Matthias Reuss,1988 This book is
based on the contributions to the IFAC Workshop Mass Spectrometry in Biotechnological Process Analysis and Control held
in Graz Austria from 23 to 24 October 1986 The idea to organize this workshop and further to prepare these proceedings was
stimulated by the following facts Biotechnological processes urgently need better on line instrumentation Mass spectrometry
MS offers a great potential to especially analyse gases and volatile compounds It is however considered that this potential by
far is not exhausted The main reason for this is that MS often still is considered to be a very expensive technique requiring
the permanent attention of a MS expert In addition methods have not yet been developed to a user friendly state On line MS
methods are available to a certain extent but need further development To stimulate such development an interdisciplinary
effort is necessary Needs of industrial and university users and experience of physicists and instrument manufacturers have
to be brought into a hopefully fruitful discussion An introductory article describes the bioprocess background including a
brief summary of the state of the art in bioprocess sensor and parameter estimation development and the potential MS offers
for bioprocess monitoring In the first chapter on Instrumentation and Gas Analysis a general overview on some developments
in MS instrumentation is given initially by Schmid Then the presently available instrumentation for bioprocess monitoring is
discussed by instrument manufacturers Winter Schaefer and Schultis Bartman Food Authenticity and Traceability M
Lees,2003-10-22 The ability to trace and authenticate a food product is of major concern to the food industry This important
topic is reviewed extensively in this authoritative text on current and emerging techniques Part one deals with analytical
techniques applied to food authentication There are chapters on both established and developing technologies as well as
discussions of chemometrics and data handling Part two relates these methodologies to particular food and beverage
products such as meat dairy products cereals and wine In part three traceability is reviewed in detail looking at the
development of efficient traceability systems and their application in practice to such areas as animal feed and fish
processing Food Authenticity and Traceability is an essential reference for all those concerned with food safety and quality
Outlines methods and issues in food authentication and traceability Deals with analytical techniques applied to food
authentication with chapters on established and developing technologies chemometrics and data handling Explores how
techniques are applied in particular sectors and reviews recent developments in traceability systems for differing food
products
