Monitoring Bird Populations By Point Counts:

Monitoring Bird Populations by Point Counts C. John Ralph, John R. Sauer, Sam Droege, 1998-05 Point counts of birds are the most widely used quantitative method and involve an observer recording birds from a single point for a standardized time period In response to the need for standardization of methods to monitor bird populations by census researchers met to present data from various investigations working under a wide variety of conditions and to examine various aspects of point count methodology Statistical aspects of sampling and analysis were discussed and applied to the objectives of point counts The final chapter presents these standards and their applications to point count methodology Monitoring Bird

Counts for Monitoring Trends in Bird Populations Jared Verner, 1988 Minute by minute analysis of point counts of birds in mixed conifer forests in the Sierra National Forest central California showed that cumulative counts of species and individuals increased in a curvilinear fashion but did not reach asymptotes after 10 minutes of counting Comparison of the expected number of individuals counted per hour with various combinations of counting time and noncounting times for record keeping and travel between counting stations showed that 10 minute counts were most efficient in most cases Counting longer than 10 minutes is not recommended because other increased risk of double counting some individuals A

Elzinga, Daniel W. Salzer, John W. Willoughby, James P. Gibbs, 2009-05-11 Monitoring Plant and Animal Populations offers an overview of population monitoring issues that is accessible to the typical field biologist and land managers with a modest statistical background. The text includes concrete guidelines for ecologists to follow to design a statistically defensible monitoring program. User friendly practical guide written in a highly readable format. The authors provide an interdisciplinary scope to address the current widespread interest in monitoring in many environmental fields including pure and applied ecology, conservation biology and wildlife management. Emphasizes the role of monitoring in adaptive management. Defines important terminology and contrasts monitoring with other data collection activities. Covers the applicable principles of sampling and shows how to design a monitoring project. Provides a step by step overview of the monitoring process illustrated by flow charts and references. The authors also offer guidelines for analyzing and interpreting monitoring data. Illustrates the foundation of management objectives and describes their components, types and development. Describes common field techniques for measuring important attributes of animal and plant populations. Reviews different methods for recording monitoring data in the field, managing the data and communicating data to policymakers. **General Technical Report PNW-GTR** , 2001 General Technical Report PSW , 1978 DESIGN J. Pratt, Carter T. Atkinson, Paul C. Banko, Bethany L. Woodworth, James D. Jacobi, 2009-01-01 Hawaii's forest bird community is the most insular and most endangered in the world and serves as a case study for threatened species globally. Ten have disappeared in the past thirty years, nine are critically endangered and even common species are currently in decline. Thane K. Pratt, his coeditors and collaborators, all leaders in their field, describe the research and conservation efforts over the past thirty years to save Hawaii's forest birds. They also offer the most comprehensive look at the reasons for these extinctions and attempts to overcome them in the future. Among the topics covered in this book are trends in bird populations, environmental and genetic factors limiting population size, avian diseases, predators and competing

alien bird species Color plates by award winning local photographer Jack Jeffrey illustrate all living species discussed or described Monitoring Bird Populations in Small Geographic Areas ,2006 Numerous methods exist for monitoring bird populations and there is a large literature describing them There are few resources however that provide comprehensive advice on every step of organizing and carrying out a survey from the early stages of planning to final use of the data Even fewer resources are designed to meet the needs of a wide variety of potential users from amateurs interested in change of bird life in a local study preserve to professionals testing hypotheses on the response of birds to habitat management although much of the advice should be the same for every monitoring program Whether survey objectives are very modest or rigorously scientific samples must be sufficiently numerous and well distributed to provide meaningful results and the survey should be well designed to ensure that the money and effort going into it are not wasted This document is intended to be a complete resource for anyone planning to organize monitoring of noncolonial landbirds within a relatively small geographic area e g from the size of a woodlot to a large park The first of its two parts provides background explaining the importance of good study design and gives specific advice on all aspects of project planning and execution of high quality data collection for the purpose of hypothesis testing The second part is self contained and nontechnical and describes complete plans for a site specific checklist survey suitable for addressing monitoring questions frequently asked by amateurs and for involvement of volunteers in data collection Throughout are references to additional resources from background literature to sources of existing survey protocols analysis software and tools for archiving data **Wildlife Study Design** Michael L.

Morrison,William M. Block,M. Dale Strickland,Bret A. Collier,Markus J. Peterson,2008-03-21 We developed the first edition of this book because we perceived a need for a compilation on study design with application to studies of the ecology conservation and management of wildlife We felt that the need for coverage of study design in one source was strong and although a few books and monographs existed on some of the topics that we covered no single work attempted to synthesize the many facets of wildlife study design We decided to develop this second edition because our original goal synthesis of study design remains strong and because we each gathered a substantial body of new material with which we could update and expand each chapter Several of us also used the first edition as the basis for workshops and graduate teaching which provided us with many valuable suggestions from readers on how to improve the text In particular Morrison received a detailed review from the graduate students in his Wildlife Study Design course at Texas A M University We also paid heed to the reviews of the first edition that appeared in the literature
