Planetary Landscapes Ronald Greeley, 1987 **Planetary Geology**, 1998 **Planetary Landscapes** Ronald Greeley, 1985-01-01 A revised paper edition of the original 1985 39 95 **From Cave Man to Cave Martian** Manfred "Dutch" von Ehrenfried, 2019-04-05 This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation thermal extremes micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions It encourages NASA to plan a precursor mission using this concept and employ a Short Stay Opposition Class mission to Mars as the first mission rather than the Long Stay concept requiring a mission that is too long too dangerous and too costly for man s first missions to Mars Included in these pages is a short history on the uses of caves by early humans over great periods of time It then describes the ongoing efforts to research caves pits tunnels lava tubes skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation It describes evidence for existing caves and lava tubes on both the Moon and Mars The work of noted scientists technologists and roboticists are referenced and described This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes **Exploring the Moon** David M. Harland, 2008-04-16 In this comprehensive overview of Man s relationship with his planet s nearest neighbor David Harland opens with a review of the robotic probes namely the Rangers which returned television before crashing into the Moon the Surveyors which soft landed in order to investigate the nature of the surface and the Lunar Orbiters which mapped prospective Apollo landing sites He then outlines the historic landing by Apollo 11 and the final three missions of comprehensive geological investigations He concludes with a review of the robotic spacecraft that made remote sensing observations of the Moon This Commemorative Edition includes a foreword by one of the original astronauts as well as an

extra section reviewing the prospect of renewed exploration there New graphics and images are also included

A History of Astronomy David Leverington, 2012-12-06 The history of astronomy is like most history a multidimensional story and when writing about a specific period the author has to decide how to handle all the developments of earlier times in order to set the scene I have done this by starting most chapters of the book with a summary of astronomical knowledge at the beginning of our chosen period together with a brief review of how such knowledge had been gained This story is not only interesting in itself but it will also assist those readers that would appreciate a brief reminder of some of the basic elements of astronomy It is also necessary to decide when to start our history Should it be the year 1900 or 1890 or should it be linked to some key development or investigation e g the discovery of the electron by J J Thomson in 1897 or the discovery of spectroscopic binary stars by Pickering and Vogel independently in 1889 or maybe the year 1890 in which Thomas Edison tried unsuccessfully to detect radio waves from the Sun and Johannes Rydberg published his formula for atomic spectra I have in fact decided to start this history at about 1890 as it was the year of publication of the Draper Memorial Catalogue of stellar spectra which together with its updates provided essential data for the understanding of stellar spectra until well into the twentieth century This date also gives a clear hundred years up to the present

The Earth in Context David M. Harland, 2001-10-18 Distinguished space historian Harland tells an inspiring tale of scientific discovery with two interwoven strands tracing the earths geological history and the Earth in relation to the solar system 100 illustrations

Wanderers in Space Kenneth R. Lang, Charles A. Whitney, 1991-03-21 How were the features on the Moon created What is the evidence for past or future life on Mars What might cause the Earth to become as hot and steamy as Venus Why do some say that a colliding asteroid wiped out the dinosaurs 65 million years ago From the earliest of times the human race has pondered upon the nature of the Heavens The moons and planets have changed from mere points of light to fascinating diverse worlds Spacecraft have visited all the planets known to ancient people Human beings have visited the Moon and robot spacecraft have landed on Venus and Mars This book presents the result of this captivating voyage of discovery recording more than two decades of extraordinary accomplishments The voyage starts with the still silent and lifeless Moon Then on to the contrasting world of Mars with its towering volcanoes and deep canyons The exploration continues across asteroid belts and icy comets to the outer planets where Voyager II revealed cyclonic storms liquid hydrogen and helium rain and the beautiful pink and blue dynamic world of Neptune This book includes numerous photos from spacecraft as well as a few works of modern art They provide the best available metaphors and images of the previously invisible worlds

Geological Sciences John P. Rafferty Associate Editor, Earth Sciences, 2011-08-15 Discusses the history of geological sciences including geology seismology and the study of geomagnetism and profiles notable Earth scientists throughout history **Books in Print**, 1991 **Dune Worlds** Ralph D. Lorenz, James R. Zimbelman, 2014-04-22 This book describes how sand dunes work why they are the way they are in different settings and how they are being studied Particular attention is paid to their formation and appearance elsewhere in the solar system New developments in knowledge about dunes make for an interesting story like the dunes themselves dune science is dynamic and the visual appeal of Aeolian geomorphology ensures that this is an attractive volume The book is divided into 4 parts the first of which introduces dunes as a planetary phenomenon showing a landscape reflecting the balance of geological processes volcanism impact tectonics erosion deposition of sediments Dunes are then considered as emergent dynamical systems the interaction of sand and wind conspires to generate very characteristic and reproducible shapes Analogies are given with other emergent structures such as patterned ground before the influence of dunes on desert peoples and infrastructure is studied together with their use as forensic climatological indicators Dune Physics is looked at with regard to the mechanics of sand the physics of wind saltation interaction of sand and air dunes versus ripples and transverse Aeolian ridges the classification of dune morphology and the sources and sinks of sand Dune Trafficability considers soil mechanics effects on mobility on Earth Mars and

elsewhere In the second part Earth Mars Titan and other moons and planets are examined beginning with a survey of the major deserts and dunefields on Earth The authors then turn to Mars and its environment sediment type dune stratigraphy sediment source and sinks and the association of dunes with topographic features Titan follows its thick cold atmosphere methane dampness low gravity morphology interaction with topography and the implications of dunes for climate and winds Dunes elsewhere conclude this part There are few dunefields on Venus but there is a possibility of Aeolian transport on Triton and volcanic related windstreaks on Io *The Compact NASA Atlas of the Solar System* Ronald Greeley,Raymond Batson,2001-11-29 The exploration of our solar system by spacecraft has been one of the greatest scientific achievements of the twentieth century The mapping of other worlds has resulted from numerous space missions by NASA extending over many years The data from these planetary missions have been synthesised by the US Geological Survey to produce detailed maps Every planet moon or small body investigated in NASA missions is discussed and where appropriate mapped Geological maps reference maps shaded relief maps synthetic aperture radar mosaics and colour photomosaics marvellously present the features of planets and their satellites This is truly a road map of our solar system All maps are fully indexed The gazetteer lists the names of all features officially approved by the International Astronomical Union The Compact NASA Atlas of the Solar System is the definitive reference atlas for planetary science **New Scientist and Science Journal** ,2003
