K. Garg,I.C. Gupta,2019-03-01

Salinity tolerance in plants is a complex problem encompassing numerous morphological physiological and biochemical processes and adaptations at the cellular sub cellular and whole plant levels The book comprising eleven chapters deals with diverse aspects of salt tolerance including plant response to salinity and sodicity crop tolerance at different growth stages and criteria for evaluating the same The mechanism of salt injury viz osmotic ionic and nutrient imbalance has been dealt with adopting an integrated approach Likewise the recent information on photosynthesis respiration carbohydrate nitrogen and protein metabolism enzyme dynamics and plant hormones as well as nodulation and symbiotic nitrogen fixation in legumes has been elaborated comprehensively Special attention has been

given to the interaction between essential nutrients and salinity as it is vital for alleviation of adverse effects of salt stress. The synthesis of knowledge on different mechanisms of salt resistance including osmoregulation with organic and inorganic solutes has also been presented. Various methods of introducing salt tolerance in plants such as breeding genetic variations, physiological approaches, tissue culture, somaclonal variation, somatic hybridization and recombinant DNA technology have been discussed. The nature and properties of salt affected soils and groundwaters and principles for amelioration and management of these critical problems have been included in this book. Furthermore, Afforestation and Agroforestry techniques for salt affected soils with emphasis on salt tolerant tree species and suitable tree crop combinations also find their much needed due space in the present book.

Amino Acids in Higher Plants J P F D'Mello, 2015-04-15. Amino acids play a role in the defence mechanisms and stress responses of plants as well as in food quality and safety for humans and animals. Recent advances in the field make a comprehensive overview of the information a necessity. This book collates chapters on plant enzymes and metabolism, modulation, molecular aspects and secondary products. Also including information on ecology, the environment and mammalian nutrition and toxicology, it provides an authoritative resource.

Nitrogen Fixation in Bacteria and Higher Plants R.C. Burns, R.W.F. Hardy, 2012-12-06. Our knowledge of the biochemistry and biophysics of dinitrogen fixation has developed rapidly in the 15 years since the first N_2 fixing enzyme system was successfully extracted from a bacterium. This period has produced a literature that now describes the N_2 fixation reaction and the nitrogenase enzyme itself in sophisticated terms though a detailed reaction mechanism at the chemical level has not yet emerged. It is the purpose of the present monograph to present an in depth review, analysis and integration of this research as is possible with a non contributed publication and to relate this work to considerations of N_2 fixation that reach beyond the confines of the biochemist's laboratory. The first section is directed as much toward the general science reader as toward the specialist. It covers the agricultural origins of man's interest in N_2 fixation and also pertinent areas of taxonomy, physiology and evolution. Ecological aspects of the subject include a comprehensive evaluation of the nitrogen cycle leading to a substantially greater estimate of the rate of global N_2 fixation than previous ones. The treatment is of a survey fashion in part to provide a general overview of N_2 fixation and in part to provide context for the biochemistry and biophysics that follow in the second section.

Marschner's Mineral Nutrition of Higher Plants Horst Marschner, 2012. Respected and known worldwide in the field for his research in plant nutrition, Dr Horst Marschner authored two editions of *Mineral Nutrition of Higher Plants*. His research greatly advanced the understanding of plant nutrition ranging from rhizosphere processes to nutrient uptake and utilization by plants in the field. While visiting field experiments in West Africa in 1996, Dr Marschner contracted malaria and passed away and until now this legacy title went unrevised. Despite the passage of time, it remains the definitive reference on plant mineral nutrition. Since the last edition, great progress has been made in the understanding of various aspects of plant nutrition. In recent years, the perspective on the mode of action of nutrients in plant metabolism and yield formation has

shifted Much progress has been made in the molecular aspects of nutrient uptake and transport within plants as well as the responses of plants to nutrient deficiency or toxicity These and many other developments are covered in this long awaited new edition P 4 of cover *Fundamental, Ecological and Agricultural Aspects of Nitrogen Metabolism in Higher Plants* J.T. Lambers,G. Stulen,J.J. Neeteson,2012-12-06 Rinie Hofstra has been a member of the Department of Plant Physiology University of Groningen the Netherlands for 24 years The nearer we came to 31 March 1985 her 65th birthday the more we all realized how we would miss her not only scientifically but also socially She left her mark on both research and teaching always with an open mind and willing to change After her PhD Thesis on Nitrogen Metabolism in Tomato Plants she first continued working in that field but soon started a joint project with the Department of Plant Ecology on hemiparasites She then became involved in carbon metabolism which resulted in her giving a Biotrop Course on C C metabolism in 3 4 Indonesia Her own research group originally working on Nitrogen Metabolism soon embraced Energy and Nitrogen Metabolism as the research on respiration became more and more important In running her group she showed all sides of her person She used to stimulate and encourage everyone around her and to integrate the various lines of research At the same time she always had an open mind for the opinion of all members of her group And together they regularly criticized and evaluated the various projects and decided how to continue **Towards the rational use of high salinity tolerant plants** Helmut Lieth,A.A. Al Masoom,2012-12-06 The Symposium on high salinity tolerant plants held at the University of Al Ain in December 1990 dealt primarily with plants tolerating salinity levels exceeding that of ocean water and which at the same time are promising for utilization in agriculture or forestry These plants could be very useful for a country like the UAE where fresh water resources are very scarce and the groundwater available at some places is already very salty More than 60 million woody trees shrubs have been planted so far and more are planned for the inland plains underlain with brackish groundwater These species were no solution for the widely barren shoreline of the UAE Here mangrove species were of potential use and one species *Avicennia Marina* occurs widely and has been successfully planted for about a decade Converting the tree plantations into economically useful cropping systems is still a problem requiring much research and development The book deals in several sections with conventional irrigation systems using marginal water The species used in these systems are mostly hybrids of conventional crops The irrigation systems however have similar problems as may be expected for irrigation with seawater Papers show the participants experiments in this area The volume serves as a link between scientists working for the improvement of classical irrigation systems and those interested in the application of a new dimension of salinity levels for irrigation water *Resistance to Salinity and Water Scarcity in Higher Plants. Insights From Extremophiles and Stress-Adapted Plants: Tools, Discoveries and Future Prospects* Ruth Grene,Nicholas J. Provart,José M. Burritt, Masayuki Fujita, Pirjo S. A. Mäkelä, 2019-11-01 In nature plants are constantly challenged by various abiotic and biotic stresses that can restrict their growth development and yields In the course of their evolution plants have evolved a variety of sophisticated and efficient mechanisms to sense respond to and adapt to changes in the surrounding environment A common defensive mechanism activated by plants in response to abiotic stress is the production and accumulation of compatible solutes also called osmolytes This include amino acids mainly proline amines such as glycinebetaine and polyamines and sugars such as trehalose and sugar alcohols all of which are readily soluble in water and non toxic at high concentrations The metabolic pathways involved in the biosynthesis and catabolism of compatible solutes and the mechanisms that regulate their cellular concentrations and compartmentalization are well characterized in many important plant species Numerous studies have provided evidence that enhanced accumulation of compatible solutes in plants correlates with increased resistance to abiotic stresses New insights into the mechanisms associated with osmolyte accumulation in transgenic plants and the responses of plants to exogenous application of osmolyte will further enhance our understanding of the mechanisms by which compatible solutes help to protect plants from damage due to abiotic stress and the potential roles compatible solutes could play in improving plants growth and development under optimal conditions for growth Although there has been significant progress made in understanding the multiple roles of compatible solute in abiotic stress tolerance many aspects associated with compatible solute mediated abiotic stress responses and stress tolerance still require more research As well as providing basic up to date information on the biosynthesis compartmentalization and transport of compatible solute in plants this book will also give insights into the direct or indirect involvement of these key compatible solutes in many important metabolic processes and physiological functions including their antioxidant and signaling functions and roles in modulating plant growth development and abiotic stress tolerance In this book Osmoprotectant mediated abiotic stress tolerance in plants recent advances and future perspectives we present a collection of 16 chapters written by leading experts engaged with

compatible solute induced abiotic stress tolerance in plants The main objective of this volume is to promote the important roles of these compatible solutes in plant biology by providing an integrated and comprehensive mix of basic and advanced information for students scholars and scientists interested in or already engaged in research involving osmoprotectant Finally this book will be a valuable resource for future environmental stress related research and can be considered as a textbook for graduate students and as a reference book for front line researchers working on the relationships between osmoprotectant and abiotic stress responses and tolerance in plants *Higher Plants, Algae and Cyanobacteria in Space Environments* Carmen Arena, Valérie Legué, Roberta Paradiso, Thomas Graham, 2021-03-15 *Encyclopedia Britannica* Hugh Chisholm, 1911 *Advances in Haploid Production in Higher Plants* Alisher Touraev, Brian P. Forster, Shri Mohan Jain, 2008-12-18 The importance of haploids is well known to geneticists and plant breeders The discovery of anther derived haploid *Datura* plants in 1964 initiated great excitement in the plant breeding and genetics communities as it offered shortcuts in producing highly desirable homozygous plants Unfortunately the expected revolution was slow to materialise due to problems in extending methods to other species including genotypic dependence recalcitrance slow development of tissue culture technologies and a lack of knowledge of the underlying processes Recent years have witnessed great strides in the research and application of haploids in higher plants After a lull in activities drivers for the resurgence have been 1 development of effective tissue culture protocols 2 identification of genes controlling embryogenesis and 3 large scale and wide spread commercial up take in plant breeding and plant biotechnology arenas The first major international symposium on Haploids in Higher Plants took place in Guelph Canada in 1974 At that time there was much excitement about the potential benefits but in his opening address Sir Ralph Riley offered the following words of caution I believe that it is quite likely that haploid research will contribute cultivars to agriculture in several crops in the future However the more extreme claims of the enthusiasts for haploid breeding must be treated with proper caution Plant breeding is subject from time to time to sweeping claims from enthusiastic proponents of new procedures *Plants, Genes, and Crop Biotechnology* Maarten J. Chrispeels, David E. Sadava, 2003 This book integrates many fields to help students understand the complexity of the basic science that underlies crop and food production
