Trevor Winchester Swan, Volume I Peter L. Swan, 2022-11-22 This book the first of two volumes explores the legacy of Trevor Winchester Swan often described as Australia's greatest ever economist An insightful biography is accompanied with Swan's most prominent articles to provide a broad view of his life and work Particular attention is given to the famous Swan Diagram known among macroeconomists worldwide Swan's four zones of economic unhappiness his view of how economies grew based on capital deepening and technical progress and the Solow

Swan model of economic growth This book aims to shed light on the enigmatic and influential life of Trevor Winchester Swan It will be relevant to students and researchers interested in the history of economic thought Capital Theory and Dynamics Edwin Burmeister,1980-11-28 Capital theory and dynamics are cornerstones for almost every branch of economics Except in a fictional world where the economies of yesterday today and tomorrow are identical issues of capital formation and dynamic behaviour must always arise Although the specialist literature is technically demanding Professor Burmeister shows that its important results can be understood and their economic significance grasped by those who do not possess the mathematical literacy required to follow rigorous proofs Even if future events are known with certainty they still influence the current economic state This is the pure role of time That future events are not known with certainty adds another complexity This book focuses mainly on the pure role of time **The Distribution of the Product** John Craven,2021-11-21 Originally published in 1979 the purpose of this book is to introduce a theory of the distribution of national income between wages profits and other categories of income The relation between this branch of distribution theory and other areas of economics is explained in the Introduction The first six chapters are designed to introduce distribution theory to students of intermediate economic principles The reader should be familiar with the basic analysis of supply demand and market equilibrium and with the use of indifference curves to represent a consumer s preferences The remaining seven chapters discuss developments of the theory introduced in the first six Innovative Behaviour in Space and Time Cristoforo S. Bertuglia,Silvana Lombardo,Peter Nijkamp,2012-12-06 In the past decade there has been growing recognition that economic development is not mainly exogenously determined but to a large extent is a transformation process induced and governed by economic actors who respond to competitive institutional and political challenge This challenge and response model is increasingly accepted as a valid analytical framework in modern growth theory and also explains the popularity of endogenous growth approaches to technological innovation issues However a major and as yet largely under researched topic is the question of the diffusion and adoption of new technological changes in the context of space time dynamics This diffusion and adoption pattern has obviously clear spatial and temporal variations connected with behavioural responses which may vary over time and different locations This means that a closer analysis of spatio temporal opportunities and impediments is necessary in order to fully map the complex interactions of technology and economy in space and time This volume sets out to bring together a collection of original contributions commissioned by the editors to highlight the spatio temporal patterns and backgrounds of the diffusion and adoption of new technologies Some are in the nature of a survey others have a modelling background and again others are case studies The contributions originate from different countries and different disciplines This book is complementary to a previously published volume on technological innovation Technological Change Economic Development and Space edited by C S Bertuglia M M Fischer and G Preto and also published by Springer Verlag 1995 Mathematical Economics and Operations Research Joseph Zaremba,1978 **Studies**

in Economics and Political Science Various,2022-07-30 This 13 volume collection originally published between 1929 and 1982 contains a selection of titles from the fields of economics and political science Many individual titles focus on Britain and include topics such as democracy environmental planning foreign policy legislation microeconomics national income and the welfare state The earliest title looks at the nature of nationality and two further titles look at politics in France This set will be an insight for those interested in the history of either field [Index of Economic Journals](#) ,1968 **The Dynamic**

Systems of Basic Economic Growth Models Bjarne S. Jensen,2012-02-02 Two central problems in the pure theory of economic growth are analysed in this monograph 1 the dynamic laws governing the economic growth processes 2 the kinematic and geometric properties of the set of solutions to the dynamic systems With allegiance to rigor and the emphasis on the theoretical fundamentals of prototype mathematical growth models the treatise is written in the theorem proof style To keep the exposition orderly and as smooth as possible the economic analysis has been separated from the purely mathematical issues and hence the monograph is organized in two books Regarding the scope and content of the two books an Introduction and Over view has been prepared to offer both motivation and a brief account The introduction is especially designed to give a recapitulation of the mathematical theory and results presented in Book II which are used as the unifying mathematical framework in the analysis and exposition of the different economic growth models in Book I Economists would probably prefer to go directly to Book I and proceed by consulting the mathematical theorems of Book II in confirming the economic theorems in Book I Thereby both the independence and interdependence of the economic and mathematical argumentations are respected **Capital, Time and Transitional Dynamics** Harald Hagemann,Roberto

Scazzieri,2009-01-13 This innovative volume presents a comprehensive appraisal of John Hicks Capital and Time 1973 thirty years on from its original publication Contributors include Walter Eltis Heinz Kurz and Maghnad Desai [The Quarterly Journal of Economics](#) Charles Franklin Dunbar, Frank William Taussig, Abbott Payson Usher, Alvin Harvey Hansen, William Leonard Crum, Edward Chamberlin, Arthur Eli Monroe, 1969 Vols 1 22 include the section Recent publications upon economics **Index of Economic Articles in Journals and Collective Volumes** American Economic Association,2003

International Economics Two Giancarlo Gandolfo,1995-05-22 This second volume covers all the conventional topics of international monetary theory and open economy macroeconomics and a lot more besides Gandolfo treats such further concepts as the theory of monetary integration and the European monetary union foreign exchange crises and the Tobin tax theory of games and international policy coordination It follows the two tier structure of the first volume and thanks to its self contained treatment may equally be used as a reference book *Paperbound Books in Print* ,1983 **The Development of Mathematical Economics** Reghinos D. Theocharis,1993-06-18 This sequel to the author's Early Development in Mathematical Economics covers developments in this field after the appearance of Cournot's Recherches in 1838 and until the publication of Jevons Theory in 1871 *The Logic of Economic Discovery* Robert M. Fisher,1986 **The Publishers'**

Trade List Annual ,1985 **Marxian and Post-Marxian Political Economy** Arun Bose,1975 Monograph on Marxism as applied to economics with particular reference to the significance of capitalism and socialism includes a bibliography pp 301 to 312 and statistical tables **Productivity, Technology and Economic Growth** Bart van Ark,Simon K. Kuipers,Gerard H. Kuper,2013-03-09 Productivity Technology and Economic Growth presents a selection of recent research advances on long term economic growth While the contributions stem from both economic history macro and microeconomics and the economics of innovation all papers depart from a common viewpoint the key factor behind long term growth is productivity and the latter is primarily driven by technological change Most contributions show implicitly or explicitly that technological change is at least partly dependent on growth itself Furthermore technology appears to interact strongly with investment in physical and human capital as well as with changes in historical political and institutional settings Together these papers are an up to date account of the remarkable convergence in theoretical and empirical work on productivity and growth over the past decades The first part deals with the characteristics of growth regimes over longer periods ranging from 20 years to two centuries The next four chapters study the determinants of productivity growth and in some cases productivity slowdown during the last quarter of the twentieth century The final five chapters focus on the role of technology and innovation as the key determinants of growth Productivity Technology and Economic Growth is therefore a welcome collection for academic scholars and graduate students in economics history and related social sciences as well as for policy makers
