singularities are also presented This volume will be useful not only to the singularity theory specialists but also to general mathematicians *Real and Complex Singularities* M. Manoel, M. C. Romero Fuster, C. T. C. Wall, 2010-10-07 The biennial meetings at São Carlos have helped create a worldwide community of experts and young researchers working on singularity theory with a special focus on applications to a wide variety of topics in both pure and applied mathematics The tenth meeting celebrating the 60th birthdays of Terence Gaffney and Maria Aparecida Soares Ruas was a special occasion attracting the best known names in the area This volume contains contributions by the attendees including three articles written or co authored by Gaffney himself and survey articles on the existence of Milnor fibrations global classifications and graphs pairs of foliations on surfaces and Gaffney's work on equisingularity *Real and Complex Singularities* Jean-Paul Brasselet, Maria Aparecida Soares Ruas, 2009-09-03 This volume collects papers presented at the eighth São Carlos Workshop on Real and Complex Singularities held at the IML Marseille July 2004 Like the workshop this collection establishes the state of the art and presents new trends new ideas and new results in all of the branches of singularities Real and Complex Singularities offers a useful summary of leading ideas in singularity theory and inspiration for future research Real and Complex Singularities Jean-Paul Brasselet, Maria Aparecida Soares Ruas, 2006-11-22 This volume collects papers presented at the eighth São Carlos Workshop on Real and Complex Singularities held at the IML Marseille July 2004 Like the workshop this collection establishes the state of the art and presents new trends new ideas and new results in all of the branches of singularities Real and Complex Singularities offers a useful summary of leading ideas in singularity theory and inspiration for future research **Recent Topics on Real and Complex Singularities**, 2006 *Real And Complex Singularities* David Mond, Marcelo Saia, 2003-03-03 This text offers a selection of papers on singularity theory presented at the Sixth Workshop on Real and Complex Singularities held at ICMC USP Brazil It should help students and specialists to understand results that illustrate the connections between singularity theory and related fields The authors discuss irreducible plane curve singularities openness and multitransversality the distribution of Afs and the real asymptotic spectrum deformations of boundary singularities and non crystallographic Coxeter groups transversal Whitney topology and singularities of Haefliger foliations the topology of hypersurface singularities polar multiplicities and equisingularity of map germs from C^3 to C^4 and topological invariants of stable maps from a surface to the plane from a global viewpoint **Real and Complex Singularities** Ana Claudia Nabarro, Juan J. Real and Complex Singularities Marcelo José Saia, José Seade, Fifteen papers from the July 2006 workshop present recent results in singularity classification equisingularity and topology theory The mathematicians propose a global classification of curves on the symplectic plane cobordism invariants of fold maps an index of quadratic differential forms and a residue theoretical approach to intersection theory Other topics include conjugate vectors of immersed manifolds Thom polynomials and Schur functions obstructions on fundamental groups of plane curve complements and exotic moduli of Goursat distributions No index is provided

Real and Complex Singularities, Oslo 1976 Per Holm, 1977-12-27 This volume contains the lectures given at the Nordic Summer School in Mathematics 1976 as well as the papers reported on in the adjoint symposium The Summer School was the 9th in the series sponsored by Nordic Research Courses of the Nordic Cultural Commission The symposium organized in conjunction with the Summer School was made possible through grants from the Norwegian Research Council for Science and Humanities NA VF It is definite that the full project could not have succeeded without the support of both organizations and I would here like to thank the Nordic Cultural Commission and the Norwegian Research Council for making it possible The present book contains nearly all talks given at the meeting with one notable exception The elegant exposition of John Mather on the genericity and finite type of the topologically stable maps was not written up in time to be included in the book The loss is partly made up for by two recent expositions in the Springer Lecture Notes No 535 and 552 which however both differ from the presentation given at the Summer School It is to be hoped that Mather's proof will appear ultimately Finally I take this opportunity to express my gratitude to the staff of the Mathematics Institute in particular to Mrs Kirkaloff and Mrs Møller

Introduction to Lipschitz Geometry of Singularities Walter Neumann, Anne Pichon, 2021-01-11 This book presents a broad overview of the important recent progress which led to the emergence of new ideas in Lipschitz geometry and singularities and started to build bridges to several major areas of singularity theory Providing all the necessary background in a series of introductory lectures it also contains Pham and Teissier's previously unpublished pioneering work on the Lipschitz classification of germs of plane complex algebraic curves While a real or complex algebraic variety is topologically locally conical it is in general not metrically conical there are parts of its link with non trivial topology which shrink faster than linearly when approaching the special point The essence of the Lipschitz geometry of singularities is captured by the problem of building classifications of the germs up to local bi Lipschitz homeomorphism The Lipschitz geometry of a singular space germ is then its equivalence class in this category The book is aimed at graduate students and researchers from other fields of geometry who are interested in studying the multiple open questions offered by this new subject

Real and Complex Singularities Ana Claudia Nabarro, 2016 **Introduction to**

Complex Theory of Differential Equations Anton Savin, Boris Sternin, 2017-03-28 This book discusses the complex theory of differential equations or more precisely the theory of differential equations on complex analytic manifolds. Although the theory of differential equations on real manifolds is well known, it is described in thousands of papers and its usefulness requires no comments or explanations. To date, specialists on differential equations have not focused on the complex theory of partial differential equations. However, as well as being remarkably beautiful, this theory can be used to solve a number of problems in real theory; for instance, the Poincaré balayage problem and the mother body problem in geophysics. The monograph does not require readers to be familiar with advanced notions in complex analysis, differential equations, or topology. With its numerous examples and exercises, it appeals to advanced undergraduate and graduate students and also to researchers wanting to familiarize themselves with the subject.
