*River Basin Sediment Systems* Darrel Maddy, Mark G. Macklin, J. C. Woodward, 2001 An exploration of the relationship between river behaviour and environmental change The research involves a wide range of disciplines including geomorphology geophysics archaeology palaeoecology engineering and planning Geomorphological Processes and Landscape Change David L. Higgitt, E. Mark Lee, 2011-07-15 The expert contributors to this cutting edge volume provide an overview of geomorphological process activity and landscape change in Britain over the past 1000 years The range of the book is unusually broad encompassing hillslope valley floor and floodplain fluvial estuarine and coastal processes Provides an overview of geomorphological process activity and landscape change in Britain over the past 1000 years The range of the book is unusually broad encompassing hillslope valley floor and floodplain fluvial estuarine and coastal processes Considers the relevance of technological and conceptual approaches to understanding landscape dynamics Examines key process environments highlighting significant trends and the influence of human activity and incorporating examples and modelling Encourages geographers to look forward to the challenges that geomorphology faces in the new millennium Find out more information about the RGS IBG journals by following the links below AREA <http://www.blackwellpublishing.com/journal.asp?ref=0004-0894> The Geographical Journal <http://www.blackwellpublishing.com/journal.asp?ref=0016-7398> Transactions of the Institute of British Geographers <http://www.blackwellpublishing.com/journal.asp?ref=0020-2754> **Climate Variability and Change** Flow Regimes from International Experimental and Network Data (Project), 2006 This volume contains 117 reviewed papers from over 30 countries published in English French and Spanish which reflect both international dimension of FRIEND and the key challenges facing hydrologists in the 21st century **Nile River Basin** Assefa M. Melesse, 2011-03-28 This book presents results of scientific studies ranging from hydrological modelling to water management and policy issues in the Nile River basin It examines the physical hydrometeorological and hydrogeological description of the basin along with analysis in understanding the hydrological processes of the basin under the changing land use stemming from population pressure and increased natural resources tapping The book discusses the increased impact of climate change on the river flows and such issues as water availability and demand management and policy to offset the imbalance between demand and available resources This book will be of interest to researchers practitioners water resources managers policy makers as well as graduate and undergraduate students It is a useful reference text for ecohydrology arid zone hydrology hydrology of transboundary rivers and similar courses Geological Correlation, 2000 **Special External Effects on Fluvial System Evolution** Jef Vandenberghe, David R. Bridgland, Xianyan Wang, 2019-12-18 Rivers are an excellent witness of the dynamics affecting Earth's surface due to their sedimentary products and morphological expression which may be considered as fluvial archives Until now the focus has been on evaluating the general impact of individual external factors However the importance of the specific environmental characteristics of these factors has become increasingly recognized as highlighted

in recent case studies For example the effects of regional climate differentiated topography and vegetation and frozen ground appear to play an essential role in the evolution of the fluvial system Integration of such environmental conditions in the processes that were active within the complex fluvial system will open new perspectives in our progressive understanding of the evolution of landscape form ecology sediment fluxes and hydrology of the system within the framework of the external drivers such as tectonics general climate and human activity This is an appealing challenge that we wish to address in the present Special Issue under the aegis of the Fluvial Archives Group FLAG

**River Restoration** Stephen Darby, David Sear, 2008-02-28 River restoration projects are designed to recreate functional characteristics within a context of physical stability They tend to focus on the development and application of geomorphic principles for river restoration design Due to different models obtaining different results on the same problem incomplete or absent data and climatic social cultural changes the designers and managers of such projects frequently face high levels of uncertainty This book will provide a systematic overview of the issues involved in minimizing and coping with uncertainty in river restoration projects A series of thematic sections will be used to define the various sources of uncertainty in restoration projects and how these show at different points in the life cycle design construction and post construction phases of restoration projects The structure of the book will offer a rational theoretical analysis of the problem while providing practical guidance in managing the different sources of uncertainty A wide range of case studies will be included from Europe North America and Australasia
