

The book cover features a landscape photograph. The upper portion shows a range of rugged, snow-capped mountains under a blue sky with wispy white clouds. Below the mountains, a wide, green valley stretches out. A river, appearing as a winding blue line, flows through the valley from the bottom right towards the center. The overall color palette is dominated by blues, greens, and whites, with some brownish tones in the lower foreground.

[Pacific Salmon Life Histories](#) Cornelis Groot,L. Margolis,1991 Pacific salmon are an important biological and economic resource of countries of the North Pacific rim They are also a unique group of fish possessing unusually complex life histories There are seven species of Pacific salmon five occurring on both the North American and Asian continents sockeye pink chum chinook and coho and two masu and amago only in Asia The life cycle of the Pacific salmon begins in the autumn when the adult female deposits eggs that are fertilized in gravel beds in rivers or lakes The young emerge from the gravel the following spring and will either migrate immediately to salt water or spend one or more years in a river or lake before migrating Migrations in the ocean are extensive during the feeding and growing phase covering thousands of kilometres After one or more years the maturing adults find their way back to their home river returning to their ancestral breeding grounds to spawn They die after spawning and the eggs in the gravel signify a new cycle Upon this theme Pacific salmon have developed many variations both between as well as within species Pacific Salmon Life Histories provides detailed descriptions of the different life phases through which each of the seven species passes Each chapter is written by a scientist who has spent

years studying and observing a particular species of salmon. Some of the topics covered are geographic distribution, transplants, freshwater life, ocean life, development, growth, feeding, diet, migration, and spawning behaviour. The text is richly supplemented by numerous maps, illustrations, colour plates, and tables, and there is a detailed general index as well as a useful geographical index.

A Review of the Landscape Conservation Cooperatives National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Board on Atmospheric Sciences and Climate, Committee on the Evaluation of the Landscape Conservation Cooperatives, 2016-11-28. The United States tradition of conserving fish, wildlife, habitats, and cultural resources dates to the mid-19th century. States have long sought to manage fish and wildlife species within their borders, whereas many early federal conservation efforts focused on setting aside specific places as parks, sanctuaries, or reserves. With advances in landscape ecology over the past quarter century, conservation planners, scientists, and practitioners began to stress the importance of conservation efforts at the scale of landscapes and seascapes. These larger areas were thought to harbor relatively large numbers of species that are likely to maintain population viability and sustain ecological processes, and natural disturbance regimes often considered critical factors in conserving biodiversity. By focusing conservation efforts at the level of whole ecosystems, landscape practitioners can better attempt to conserve the vast majority of species in a particular ecosystem. Successfully addressing the large-scale interlinked problems associated with landscape degradation will necessitate a planning process that bridges different scientific disciplines and across sectors, as well as an understanding of complexity, uncertainty, and the local context of conservation work. The landscape approach aims to develop shared conservation priorities across jurisdictions and across many resources to create a single collaborative conservation effort that can meet stakeholder needs. Conservation of habitats, species, ecosystem services, and cultural resources in the face of multiple stressors requires governance structures that can bridge the geographic and jurisdictional boundaries of the complex socio-ecological systems in which landscape-level conservation occurs. The Landscape Conservation Cooperatives (LCC) Network was established to complement and add value to the many ongoing state, tribal, federal, and nongovernmental

efforts to address the challenge of conserving species habitats ecosystem services and cultural resources in the face of large scale and long term threats including climate change A Review of the Landscape Conservation Cooperatives evaluates the purpose goals and scientific merits of the LCC program within the context of similar programs and whether the program has resulted in measurable improvements in the health of fish wildlife and their habitats **Diabetes as a Disease of Civilization** Jennie Rose Joe,Robert S.
