## **Road Pricing Theory And Evidence:**

**Road Pricing** Georgina Santos,2004-07-31 Traffic congestion affects towns and cities everywhere and in some places it is regarded as one of the most urgent and important problems in need of a solution Road pricing is undoubtedly recognised as an effective traffic demand management tool The recent London congestion charging scheme seems to be showing that public and political opposition is not insurmountable Thus the ghost that prevented the introduction of a policy supported by transport economists for over 80 years seems to have disappeared or at least weakened The book contains twelve papers useful to different types of audience such as researchers and postgraduate students civil servants policy makers and consultants The first part is mainly theoretical and concentrates on second best congestion pricing including pricing in urban contexts the impact on the performance of the road network optimal locations and charge levels dynamic aspects such as time variation of tolls potential impacts of road pricing on costs and service quality of public transport buses and efficiency costs and transport sector effects of different types of pricing when they guarantee a balanced budget per mode The second part contains chapters that describe the schemes in place around the world such as Singapore Norway London and the US The volume is an update of the state of the art on the subject and the first one to have been written and appear after the London scheme was implemented and to contain an assessment of its preliminary impacts Road Pricing, the Economy and the Environment C. Jensen-Butler,Brigitte Sloth,Morten M. Larsen,Bjarne Madsen,Otto A. Nielsen,2008-01-24 Economic growth and globalisation create traffic growth leading to congestion which again increases travel times and costs Road pricing is an instrument that may efficiently reduce the negative impacts This volume is a collection of research papers on the use of road pricing The focus is on passenger transport and the papers cover a wide range of approaches including theoretical modelling and empirical studies of road pricing experience from different cities Road Pricing: Theory, Empirical Assessment and Policy Börje Johansson,Lars-Göran Mattsson,2012-12-06 Road pricing tolls etc as a means of generating revenue for infrastructure investment has become a major policy option in both Europe and North America It can also be used as a policy in the management of traffic demand and flow environmental objectives and optimal resource allocation as regards the size of investments Road pricing is assumed to be able to solve many problems simultaneously congestion control pollution reduction and investment financing This volume assembles and assesses theoretical knowledge empirical results and experiences of actual road pricing In addition the impact of new information technology on future policy formulation is considered **Investment and the use of Tax and Toll Revenues in the Transport Sector** Andre de Palma,Robin Lindsey,Stef Proost,2007-04-24 Transport infrastructure developments will depend increasingly on the level of user charges One reason is the ongoing liberalization of the EU transport sector especially for air and rail Another is the trend towards implementing tolls and other user charges on roads It is expected that user charges will progressively replace government subsidies for infrastructure expansion and maintenance Revenues from user charges may also be used to cross

subsidize other transport modes The surplus anticipated on urban roads could be used to fund infrastructure and operation of public transport and or non urban roads This book brings together both the theory and the current practice of user charges tolls and revenue use in European countries It examines public finance aspects such as earmarking as well as public management aspects of different pricing and revenue use principles A set of guidelines is developed for a better use of toll and tax revenues The set of guidelines is tested with a new cost benefit tool in case studies that cover France Germany Norway Switzerland and the UK Research in Transportation Economics is now available online at ScienceDirect full text online of volumes 6 onwards
