**and Their Role in the Environment** Radu Cornel Guiaşu, 2016-08-01 The young field of invasion biology initially a branch of ecology and conservation biology has greatly expanded particularly in the last two and a half decades or so As a result the potential negative effects of introduced species have been widely advertised and sometimes perhaps overemphasized This book attempts to restore some balance to the current debate over the role of non native species by offering a broader perspective and taking a longer term evolutionary look at these species and their impact in their new environments The relatively arbitrary nature of terms such as native and non native and the rather inconsistent ways in which such terms are applied to biological species as well as the subjective boundaries of so called native ranges are analyzed The role of non native species in their new environments can be considerably more complex than the anti introduced species information would often suggest Thus the more positive and nuanced perspective on introduced species and their impact offered in this book is much needed and long overdue **Ecology, Conservation, and Status of Reptiles in Canada** Carolyn N. selected the thirty natural areas most rewarding to visitors and provided accounts of what you will encounter there and what you can learn of the city's history as well. The variety of flora and fauna is astonishing. In one park alone the Leslie Street Spit more than three hundred species of birds have been identified since the turn of the millennium. The increasingly scarce butternut tree can be found in Warden Woods and wildlife such as deer, beaver, foxes and coyotes are often spotted along many ravine trails. Jason tells the story of ongoing efforts of ecological restoration and stewardship to protect these habitats and ecosystems such as the wetlands of Taylor Creek Park and the old growth forest within Glendon Forest. The ravines also contain many landmarks of local history: rumours of buried British gold in Scarborough's Gates Gully, large First Nations encampments near L'Amoureux Park and early industries like Todmorden Mills. With extensive visuals illustrating all thirty ravines and forests from across the city, this book offers something for every Torontonians and every visitor. *Canadian Books in Print. Boundy, 2014-04-22 *Snakes of the World: A Catalogue of Living and Extinct Species* the first catalogue of its kind covers all living and fossil snakes described between 1758 and 2012 comprising 3 509 living and 274 extinct species allocated to 539 living and 112 extinct genera. Also included are 54 genera and 302 species that are dubious or invalid resulting in recognition of 705 genera and 4 085 species. Features: Alphabetical listings by genus and species. Individual accounts for each genus and species. Detailed data on type specimens and type localities. All subspecies synonyms and proposed snake names. Distribution of species by country, province and elevation. Distribution of fossils by country and geological periods. Major taxonomic references for each genus and species. Appendix with major references for each country. Complete bibliography of all references cited in text and appendix. Index of 12 500 primary snake names. The data on type specimens includes museum and catalog number, length and sex and collector and date. The listed type localities include restrictions and corrections. The bibliography provides complete citations of all references cited in the text and appendix and taxonomic comments are given in the remarks sections. This standard reference supplies a scientific, academic and professional treatment of snakes appealing to conservationists and herpetologists as well as zoologists, naturalists, hobbyists, researchers and teachers.

**Quill & Quire**, 2004. *Threatened Amphibians of the World*. S. N. Stuart, Conservation International, 2008. Amphibians are facing an extinction crisis but getting to the facts has been difficult. *Threatened Amphibians of the World* is a visual journey through the first ever comprehensive assessment of the conservation status of the world's 6 000 known species of frogs, toads, salamanders and caecilians. All 1 900 species known to be threatened with extinction are covered, including a description of threats to each species and an evaluation of conservation measures in place or needed. Each entry includes a photograph or illustration of the species where available, a distribution map and detailed information on range, population and habitat and ecology. Introductory chapters present a detailed analysis of the results complemented by a series of short essays written by many of the world's leading herpetologists. Appendices include annotated lists of lower risk species and a country by
