Room Acoustics First Edition:

Room Acoustics Heinrich Kuttruff, 2018-10-08 Since publication of the first edition in 1973 this professional and scientific reference has become the standard work in the field providing detailed analysis of the state of the art in room acoustics It outlines the theory and practice of sound behaviour in enclosed spaces Particular emphasis is given to the properties and calculation of reverberation the most obvious acoustical feature of a closed room Further key topics include the mechanisms of sound absorption and psychoacoustical factors from which design parameters and figures of merit are derived Two chapters are devoted to practical questions such as measurement techniques and the procedures of room acoustical design The interaction between a room's acoustic properties and its electroacoustic systems is also considered and refined systems for optimizing listening conditions in a room are presented This edition includes a new list of symbols and updated sections include the measurement of the impulse response including a discussion of distortions sound propagation as a diffusive process and scattering by wall irregularities

Auralization Michael Vorländer, 2020-08-28 Auralization is the technique of creation and reproduction of sound on the basis of computer data With this tool it is possible to predict the character of sound signals which are generated at the source and modified by reinforcement propagation and transmission in systems such as rooms buildings vehicles or other technical devices This book is organized as a comprehensive collection of the basics of sound and vibration acoustic modelling simulation signal processing and audio reproduction With some mathematical prerequisites the readers will be able to follow the main strategy of auralization easily and work out their own implementations of auralization in various fields of application in architectural acoustics acoustic engineering sound design and virtual reality For readers interested in basic research the technique of auralization may be useful to create sound stimuli for specific investigations in linguistic medical neurological and psychological research and in the field of human machine interaction
