In the Bubble John Thackara, 2006-02-17 How to design a world in which we rely less on stuff and more on people We're filling up the world with technology and devices but we've lost sight of an important question What is this stuff for What value does it add to our lives So asks author John Thackara in his new book In the Bubble Designing for a Complex World These are tough questions for the pushers of technology to answer Our economic system is centered on technology so it would be no small matter if tech ceased to be an end in itself in our daily lives Technology is not going to go away but the time to discuss the end it will serve is before we deploy it not after We need to ask what purpose will be served by the broadband communications smart materials wearable computing and connected appliances that we're unleashing upon the world We need to ask what impact all this stuff will have on our daily lives Who will look after it and how In the Bubble is about a world based less on stuff and more on people Thackara describes a transformation that is taking place now not in a remote science fiction future it's not about as he puts it the schlock of the new but about radical innovation already emerging in daily life We are regaining respect for what people can do that technology can't In the Bubble describes services designed to help people carry out daily activities in new ways Many of these services involve technology ranging from body implants to wide bodied jets But objects and systems play a supporting role in a people centered world The design focus is on services not things And new principles above all lightness inform the way these services are designed and used At the heart of In the Bubble is a

belief informed by a wealth of real world examples that ethics and responsibility can inform design decisions without impeding social and technical innovation

Complexity Theories of Cities Have Come of Age Juval

Portugali, Han Meyer, Egbert Stolk, Ekim Tan, 2012-02-03 Today our cities are an embodiment of the complex historical evolution of knowledge, desires and technology. Our planned and designed activities co-evolve with our aspirations mediated by the existing technologies and social structures. The city represents the accretion and accumulation of successive layers of collective activity structuring and being structured by other increasingly distant cities reaching now right around the globe. This historical and structural development cannot therefore be understood or captured by any set of fixed quantitative relations. Structural changes imply that the patterns of growth and their underlying reasons change over time and therefore that any attempt to control the morphology of cities and their patterns of flow by means of planning and design must be dynamical based on the mechanisms that drive the changes occurring at a given moment. This carefully edited post-proceedings volume gathers a snapshot view by leading researchers in the field of current complexity theories of cities. In it, the achievements, criticisms and potentials yet to be realized are reviewed and the implications to planning and urban design are assessed.

Digital and Smart Cities Katharine Willis, Alessandro Aurigi, 2017-10-12 Digital and Smart Cities presents an overview of how technologies shape our cities. There is a growing awareness in the fields of design and architecture of the need to address the way that technology affects the urban condition. This book aims to give an informative and definitive overview of the topic of digital and smart cities. It explores the topic from a range of different perspectives both theoretical and historical and through a range of case studies of digital cities around the world. The approach taken by the authors is to view the city as a socially constructed set of activities, practices and organisations. This enables the discussion to open up a more holistic and citizen-centred understanding of how technology shapes urban change through the way it is imagined, used, implemented and developed in a societal context. By drawing together a range of currently quite disparate discussions, the aim is to enable the reader to take their own critical position within the topic. The book starts out with definitions and sets out the various interpretations and aspects of what constitutes and defines digital cities. The text then investigates and considers the range of factors that shape the characteristics of digital cities and draws together different disciplinary perspectives into a coherent discussion. The consideration of the different dimensions of the digital city is backed up with a series of relevant case studies of global city contexts in order to frame the discussion with real-world examples.
