Mass Transfer In Close Binary Stars Gas Dynamical Treatment:

Mass Transfer in Close Binary Stars A. A. Bofarchuk, 2002-04-25 In recent years significant advances have been made in the numerical simulation of mass transfer processes of binary stars These are dealt with concisely in this book It covers background theory and sets out basic principles giving many practical examples It then offers a brief review of the available observational evidence of mass transfer in binaries

Eclipsing Binary Stars: Modeling and Analysis Josef Kallrath, Eugene F. Milone, 2009-08-14 Have you ever stopped at a construction project on the way to your office and the day's astrophysics Remember the other onlookers folks just enjoying the spectacle as we all do in following developments away from our areas of active work We are excited and thrilled when the Hubble Space Telescope discovers an Einstein Cross when the marvelous pulsars enter our lives and when computer scientists put a little box on our desk that outperforms yesterday's giant machines We are free to make use of such achievements and we respect the imagination and discipline needed to bring them about just as onlookers respect the abilities and planning needed to create a building they may later use After all each of us contributes in our own areas as best as we can In addition to the serious onlookers there will be passersby who take only a casual look at the site They may use the building later but have little or no interest in its construction and give no thought to the resources needed to bring it to completion Upon arriving at work those persons write astronomy and astrophysics books at various levels in which they must say something about close binary stars Usually a page or two will do and the emphasis is on the MLR mass luminosity radius data obtained only from binaries

Dynamics of Close Binary Systems Zdenek Kopal, 2012-12-06 The aim of the present book will be to provide a comprehensive account of our present knowledge of the theory of dynamical phenomena exhibited by close binary systems and on the basis of such phenomena as have been attested by available observations to outline probable evolutionary trends of such systems in the course of time The evolution of the stars motivated by nuclear as well as gravitational energy sources constitutes nowadays a well established branch of stellar astronomy No theories of such an evolution are as yet sufficiently specific let alone infallible not to require continual tests by a confrontation of their consequences with the observed properties of actual stars at different stages of their evolution The discriminating power of such tests depends of course on the range of information offered by the test objects Single stars which move alone in space are now known to represent only a minority of objects constituting our Galaxy of Chapter 1 2 and are moreover not very revealing of their basic physical characteristics such as their masses or absolute dimensions If there were no binary systems in the sky the only star whose vital statistics would be fully known to us would be our Sun

Be and Shell Stars A. Slettebak, 1976-11-30 The International Astronomical Union Symposium No 70 on Be and Shell Stars the Merrill McLaughlin Memorial Symposium was held in Bass River Cap Cod Massachusetts U S A from September 15th through 18th 1975 Fifty three astronomers from Argentina Belgium Canada Czechoslovakia France Israel the United Kingdom the United States and the Vatican attended and participated in the Symposium This volume which

parallels the actual program closely contains the papers presented at the Symposium plus most of the discussion following the papers New observational techniques and fresh theoretical ideas have resulted over the past few years in a renewed interest in Be and shell stars At IAU Symposium No 51 on Extended Atmospheres and Circumstellar Matter in Spectroscopic Binary Systems the Otto Struve Memorial Symposium in Parksville British Columbia Canada three years ago a number of participants expressed the wish to organize a symposium on Be and shell stars If we wish to identify an official Father of IAU Symposium No 70 it would be Mirek Plavec who in his capacity as President of IAU Commission 42 Photometric Double Stars requested and received the cooperation of Commissions 29 Stellar Spectra and 36 Stellar Atmospheres suggested an Organizing Committee and wrote to the IAU General Secretary in 1973 requesting that the IAU Executive Committee approve the proposed conference as an IAU Symposium

Nuclear Science Abstracts, 1976 **Plasmas in the Laboratory and in the Universe** Giuseppe Bertin, Daniela Farina, Roberto Pozzoli, 2004-03-26 The volume illustrates the State of the art and new directions in plasma physics space physics and astrophysics It covers several hot topics of interdisciplinary interest where progress is made by the use of joint expertise It summarizes an unusually lively symposium that has gathered world experts with a broad spectrum of research interests Interdisciplinary meetings at the border between plasma physics and astrophysics are becoming increasingly important In the recent past several proceedings volumes have been devoted to astrophysical plasmas This volume has the unique feature of being professional but not specialized because it covers an unusually broad spectrum of topics under the common theme of the study of complex and collective phenomena in macroscopic systems from the scale of laboratory plasma experiments to the scale of the universe Included are basic plasma processes space plasmas planetary plasmas and the heliosphere solar and stellar plasmas plasmas around compact objects plasmas in galaxies plasmas in clusters of galaxies cosmological plasmas testing plasma astrophysics in the laboratory *Scientific and Technical Aerospace Reports*, 1991 Literature 1984, Part 2 S. Extended Atmospheres and Circumstellar Matter in Spectroscopic Binary Systems A.H. Batten, 2012-12-06 The proposal to organize a Symposium on circumstellar matter and extended atmospheres in binary systems was first made by the Dominion Astrophysical Observatory to the Executive Committee of the International Astronomical Union in the summer of 1969 It received the support of the presidents of Commissions 29 Stellar Spectra 30 Radial Velocities 36 Stellar Atmospheres and 42 Photometric Double Stars Approval in principle was given by the Executive Committee almost immediately and the Committee further suggested that the Symposium be officially designated the Struve Memorial Symposium Final approval was given at the time of the 1970 General Assembly of the Union when the dates of the Symposium were set for August or September 1972 The Organizing Committee set up consisted of K O Wright Chairman A H Batten K H Böhm A A Boyarchuk G

Larsson Leander and M Plavec In addition J Sahade and F B Wood acted as advisory members Local organization was entrusted to a committee consisting of A H Batten E K Lee and C D Scarfe The final dates selected were September 6 12 1972 and the Symposium was held at the Island Hall Hotel Parksville B C on Vancouver Island some 90 miles from Victoria The Organizing Committee attempted to arrange a Symposium of the type in which no contributed papers would be presented and discussion would range as widely as possible over the field covered by the six invited review papers **The Cambridge N-Body Lectures** Sverre Aarseth, Christopher Tout, Rosemary Mardling, 2008-09-26 Published under the auspices of the Royal Astronomical Society this volume contains a set of extensive school tested lectures with the aim to give a coherent and thorough background knowledge of the subject and to introduce the latest developments in N body computational astrophysics The topics cover a wide range from the classical few body problem with discussions of resonance chaos and stability to realistic modelling of star clusters as well as descriptions of codes algorithms and special hardware for N body simulations This collection of topics related to the gravitational N body problem will prove useful to both students and researchers in years to come **Symposium** International Astronomical Union, 1976 *Energy Research Abstracts*, 1985

Transactions of the International Astronomical Union International Astronomical Union, 1976 *NBS Special Publication*, 1968 *Structure and Evolution of Single and Binary Stars* C. de Loore, C. Doom, 2012-12-06 Classical stellar evolution theories have undergone some drastic changes in recent decades New insights into the development of stellar interiors were obtained from studying stars in various stages of their lives as well as with the help of fast computers which gave a boost to the branch of numerical modelling of stellar structure and evolution This book is divided into two parts The first part deals with the general aspects of stellar structure and evolution including a chapter on numerical modelling The second part deals with specific evolutionary aspects of single and binary stars with a variety of masses The last chapter gives several models of stars with specific masses The book is intended as an introduction for students as well as a reference for researchers Publications of the National Bureau of Standards United States. Publications of the National Institute of Standards and Technology ... Catalog National Institute of Standards and Technology (U.S.), 1983 Mechanics of Turbulence of Multicomponent Gases Mikhail Ya. Marov, Aleksander V. Kolesnichenko, 2002-02-28 Space exploration and advanced astronomy have dramatically expanded our knowledge of outer space and made it possible to study the indepth mechanisms underlying various natural phenomena caused by complex interaction of physical chemical and dynamical processes in the universe Huge breakthroughs in astrophysics and the planetary sciences have led to increasingly complicated models of such media as giant molecular clouds giving birth to stars protoplanetary accretion disks associated with the solar system s formation planetary atmospheres and circumplanetary space The creation of these models was promoted by the development of basic approaches in modern mechanics and physics paralleled by the great advancement in the computer sciences As a result numerous multidimensional non stationary

problems involving the analysis of evolutionary processes can be investigated using wide range numerical experiments. Turbulence belongs to the most widespread and at the same time the most complicated natural phenomena related to the origin and development of organized structures of different scale at a definite flow regime of fluids in essentially non-linear hydrodynamic systems. This is also one of the most complex and intriguing sections of the mechanics of fluids. The direct numerical modeling of turbulent flows encounters large mathematical difficulties while the development of a general turbulence theory is hardly possible because of the complexity of interacting coherent structures. Three-dimensional non-steady motions arise in such a system under loss of laminar flow stability defined by the critical value of the Reynolds number.
